NE'PTUNE [of *nando*, i. e. ſwimming, or of *nubendo*, L. *i. e.* covering, becauſe the Sea covers the Earth or as others ſay, from the *Lybian*, or the *Egyptian* Word *nephia*, ſignifying Capes, Promontories, and the Waſtes or Extremeties of the Ground or Sea.] The *Greeks* call him ποσειδὼν, from the *Phœnician* Word *Poſedoni*, a breaker or deſtroyer of Ships, *Neptune* was one of the Children of *Saturn*, who at the Diviſion of the World, among him and his Brethren, had the Command of the Sea allotted to him: His Scepter was a Trident; he bears a Trident inſtead of a Scepter, becauſe Fiſhermen in fiſhing make frequent uſe of a Trident; or becauſe this three forked Inſtrument is very apt or fit for ſtirring the Earth. And his Chariot a great Sea-Shell, drawn either by Whales or Sea Monſters, or by Horſes, whoſe lower Parts were thoſe of a Fiſh. His Wife was called *Amphitrite*, becauſe the Sea does compaſs the Earth. He is feigned to have taught Men the uſe of an Horſe, which he cauſed to come forth of the Earth, by a blow of his Trident, at the Diſpute that he had with *Minerva*, about giving a Name to the City of *Athens*, in the *Areopagus*, as an Olive-Tree did from *Minerva*'s ſtriking the Rock with her Spear: But becauſe he had engag'd himſelf in a Conſpiracy againſt *Jupiter*, he was confin'd to the Earth, and being under ſtrait Circumſtances, was neceſſitated to offer himſelf to the Service of *Laomedon*, to help him to build the City of *Troy*. The *Tritons*, which were half Men and half Dolphins, were his Children, who attended him, ſounding Shell-Trumpets. By his Converſation with the Earth, he begot the *Harpies*, Monſters that had the Faces of Maids, but Bodies like Vultures, with Wings, and Claws on their Hands and Feet, and whatever they touch'd was infected and ſpoiled; and whatſoever came near them they ſtole.

Neptune was a God in great Eſteem with the *Romans*, not only as they thought him to have the Command of one of the *Elements*; but becauſe, they ſay, he adviſed them, in the firſt beginning of their Empire, when there was a ſcarcity of Women in the City, to ſteal the *Sabine* Virgins. He was called *Hippius* and *Equeſter*, becauſe he taught Men the Uſe of Horſes, and in acknowledgment of the Benefit that their Empire had received from Horſes, they inſtituted Horſe-Races in honour of him. He had a famous Temple in *Rome*, inrich'd with the Spoils of many Sea Victories; but *Auguſtus* the Emperor, cauſed his Statue to be pulled down, becauſe he was thought to have raiſed a Tempeſt againſt him at Sea, where he was like to have been drowned.

So that *Neptune* is the ſame with that Power and Virtue, which is contained in Moiſture.

Neptune is called Φυτάλμιος, becauſe all things which the Earth produces are done by the power and efficacy of Moiſture. He is alſo called Ενοσίχθων, Σεισίχθων, Ενοσίγαιον and Τινακτοκράτωρ, all which Epithets ſignify a mover of the Earth. For the Spirit which is in the Bowels of the Earth, being pent up in narrow Streights. ſeek for a Paſſage out, and burſting out, they move and break the Earth. And that Eruption ſometimes makes a bellowing.

NE'PTUNE [in *Painting*, &c.] is repreſented clad in a Mantle of Blue or Sea Green, trimmed with Silver, with long hoary Hair, riding in a blue Chariot, drawn by monſtrous Fiſhes, or elſe on the Back of a Dolphin, holding in his Hand a ſilver Trident.

NE'REUS [of νηδὸς, Gr.] one of the poetical Deities of the Sea; the Son of *Oceanus* and *Tethys*, who married his Siſter *Doris*, and whom they make to have fifty Daughters, called *Nereides*. The Moral of which Fable is fifty particular Seas, being Parts of the main Sea it ſelf.

NEREUS, is the Sea. It is derived of ἀπὸ τῦ νάδειν, *i. e.* of ſwimming, becauſe we ſwim through the Sea. They repreſent *Nereus* as an old Man, becauſe the Froth of the Sea repreſents hoary-headedneſs. For *Leucothoe*, who is the Daughter of *Nereus*, intimates ſomething of that matter, as much as to ſay the whiteneſs of Froth.

NE'RGAL [*i. e.* in the *Samaritan* Language, a Cock] an Idol of the Sun, brought into *Samaria* from *Perſia*, and worſhipped in the Form of a Cock.

NERGAL [נרגל, *Heb.*] a continual Fire, which the *Perſian Magi* preſerved upon an Altar in honour of the Sun, and the Lights of the Firmament. This Fire was always kept burning, like the Veſtal Fire of the *Romans*; whenſoever they meddled with this Fire, they uſed to ſing Hymns in honour of the Sun. The *Jewiſh* Writers affirm, that this was the God adored in *Ur* of the *Chaldees*, and that *Abraham* was obliged to quit that Country, becauſe he would not conform to that Idolatry. The *Perſians* were wont to dedicate to the Sun a Chariot and Horſes, and to adore that glorious Light every Morning. The *Mahometans* do ſtill ſeem to perform ſome kind of Devotion to the riſing of the Sun, ſaluting aſſoon as they ſee it with great humility, and purifying themſelves by waſhing. The *Chaldæans* were wont to burn themſelves in honour of *Nergal*. And *Curtius* tells us, that *Alexander* was an Eye-Witneſs of this Madneſs. The Perſon to be thus ſacrificed took his farewel of his Friends in a publick Banquet; and after he was reduced to Aſhes (ſome Writers ſay) the cunning Prieſts cauſed the Devil to appear in his Shape to his Acquaintance, and relate to them ſtrange Stories of the other World.

NE'RVOUSNESS, fulneſs of nerves, finewineſs, ſtrength, *&c.*

NERVOUS *Juice* or *Spirit*, is a pure, ſubtil, volatile Humour, commonly called the Animal Spirits; ſecreted from the arterial Blood in the cortical Part of the Brain, collected in the *medulla oblongata*, and driven thence by the force of the Heart, into the Cavities of the Nerves, to be by them convey'd throughout the Body, for the purpoſes of Senſation and Animal Motion.

NERVE [*nervus*, L.] or Sinew, a white, round, long Body, compoſed of ſeveral Threads or Fibres; deriving its origin from the Brain or the ſpinal Marrow; and diſtributed thro' all the Parts of the Body; ſerving for the Conveyance of the Animal Spirits, for the performance of Senſation and Motion.

NERVE [with *Botan.*] a long Filament or tough String, which runs acroſs or length ways in the Leaf of a Plant; as in Plantane, *&c.*

Olfactory NERVES, call'd by Anatomiſts *Par Olfactorium*, i. e. the olfactory Pair, ariſe in the fore Part of the Brain a little below the *Os Frontis*, and are pretty thick near the *Os Cribroſum*, and are there called *Proceſſus Papillares*; when they have made their way through the *Os Cribroſum*, they are diſtributed throughout the Membranes of the Noſe; their uſe being in the ſenſation of *Smelling*.

Optick NERVES [*Anatomy*] are Nerves which paſs through the Scull, in two Perforations of the Baſis of it, a little above the *Sella Equina*, from whence they proceed to the Tunicks of the Eye, whereof the *Retina*, which is ſuppoſed to receive, the Objects of Viſion, is an extenſion of the inner or medullary Part alone.

Pathetick NERVES [*Anat.*] are certain Nerves which ariſe behind the *Teſtes*, and paſs out of the Skull at the ſame *Foramen* of the former Pair, and ſpend themſelves wholly on the trochlear Muſcle.

Intercoſtal NERVES [*Anatomy*] are compos'd of nervous Filaments, deriv'd partly from the Brain, *viz.* the Branches of the fifth and ſixth Pair, and partly from the *Spinal* Marrow, by thoſe Branches they receive from the vertebral Nerves.

Cervical NERVES [*Anat.*] theſe conſiſt of ſeven Pair, the firſt and ſecond Pair ariſe betwen the firſt and ſecond *Vertebra* of the Neck; the ſecond Pair contributes the main Branch towards the formation of the *diaphragmatick Nerves*; the three laſt Pair of the Neck, joining with the two firſt of the *Dorſum* or *Thorax*, make the *Brachial Nerves*.

Dorſal

Dorſal NERVES [*Anat.*] are twelve in Number, theſe contribute to the *Brachial Nerves* all, except the two upper Pair, and are generally diſtributed into the intercoſtal and abdominal Muſcles, the *Pleura*, and the external Parts of the *Thorax*.

The *Lumbal* NERVES [*Anat.*] of theſe there are five Pair, the firſt of which ſends two Branches to the lower ſide of the Diaphragm; the ſecond, ſome Twigs to the genital Parts; and others, as well as the three following, to give the firſt Roots to the *crural Nerves*. The reſt of the Branches of the lumbal Nerves, are diſtributed into the Muſcles of the Loins adjacent Parts.

Brachial NERVES [*Anat.*] are produced partly from the *Cervical*, and partly from the *Dorſal*. After the ſeveral Branches whereof theſe Nerves are compoſed, have been variouſly compleated and united, they run a little way in a Trunk, and then divide again into ſeveral Branches, and are variouſly diſtributed into the Muſcles of the Skin and Arms.

The Crural NERVES [*Anat.*] are compos'd of an Union of ſix or ſeven Pair, *viz.* the three laſt of the *Lumbal*, and the three or four firſt of the *Os Sacrum*. This is the largeſt and firmeſt Trunk in the Body. Theſe ſpend their upper Branches on the Muſcles of the Thigh and Skin, as far as to the Knee, and then proceed in a Trunk downwards, which ſends forth its Branches to the Extremities of the Toes.

Diaphragmatick NERVES [*Anat.*] theſe Nerves proceed from the Cervicals. After theſe Nerves have joined in a Trunk, they run through the *Mediaſtinum*, and arriving at the *Diaphragm*, they ſend out ſeveral Branches, ſome of them into the muſcular, and others into the tendinous Part of it.

NERVES [*Architect.*] are the Mouldings of the projecting Arches of Vaults; or ſuch as ariſe from the Branches of *Ogives*, and croſs each other diagonally in *Gothick* Vaults, and ſerve to ſeparate the nervous Spirit. See *Pendentives*.

When *Cræſus* over *Halis* roweth,
A mighty Nation he overthroweth.

Which he interpreting according to his own Deſires, croſſed the River, but was vanquiſh'd himſelf by *Cyrus*, King of *Perſia*, and his own Nation and Country ruined.

King *Pyrrhus*, before he made War with the *Romans*, conſulting this Oracle, received the following Anſwer,

Aio te Æacide Romanos vincere poſſe.

Which ambiguous Prediction he conſtruing, *Te poſſe vincere Romanos*, Thou ſhalt overcome the *Romans*, gave them Battle; but found in the Event that the Devil meant, *Romanos poſſe vincere te*, That the *Romans* ſhould overcome him, as they did.

Another Prince conſulting this Oracle concerning the ſucceſs of his Warring, receiv'd this Anſwer,

Ibis redibis nunquam per bella peribis.

Which he diſtinguiſh'd with Commas thus, *Ibis, redibis, nunquam per bella peribis*, Thou ſhalt go, thou ſhalt return, thou ſhalt never periſh by War; undertook the War and was ſlain; upon which his Nobility canvaſſing the Oracle, perceiv'd that it ſhould have been thus comma'd, *Ibis, redibis nunquam, per bella peribis*, i. e. Thou ſhalt go, thou ſhalt never return, thou ſhalt periſh by War.

Of the latter Opinion, that the Predictions of the Oracles were not ſo much by diabolical Operation, as by the Artifices of the Prieſts, were *Euſebius*, *Ariſtotle* and *Cicero*, and many other famous Men, who were of Opinion, that Oracles were only the cunning Tricks of the Prieſts, by which the Credulous were abus'd under the colour of Inſpiration and Prediction.

Demoſthenes ſeem'd apprehenſive of this Cheat, when he ſaid that *Pythia* always favour'd King *Philip* in her Anſwers.

The firſt Oracles we read of, were of *Jupiter Dodonæus* in *Epirus*, and *Jupiter Ammon* in *Afrita*. Beſides which there were ſeveral others. See *Amphiaraus*, *Dodona*, *Trophonius*, &c. in their proper Places.

Some have been of Opinion that Oracles ceas'd upon the coming of *Chriſt*; tho' this cannot indeed be ſaid, yet it ſhould ſeem that they began then to decline; and *Suidas* relates, that *Auguſtus*, in whoſe Time our Saviour was Born, conſulting the Oracle about his Succeſſor, receiv'd the following, not ſatisfying Anſwer,

Πῶϊ
Ἑβραῖός με κέλευσε μακάρτατον ἄνδρα θεοῖς
Τόνδε δόμον προλιπεῖν, καὶ ἐλθεῖν ἔνδυθι λαβεῖν
Λοιπὸν ἄπαυστι σιγῶν ἐκ βωμῶν ἡμετέρων.

An *Hebrew* Child, whom the bleſt Gods adore,
Hath bid me leave theſe Shrines and pack to Hell;
So that of Oracles I can no more.
In Silence leave our Altar and farewel.

Whereupon *Auguſtus* coming home, erected an Altar in the Capital, cauſing this Inſcription to be engraven on it in capital Letters, HÆC EST ARA PRIMOGENITI DEI.

And *Juvenal*, who liv'd in *Domitian*'s Time, ſays, *Delphis oracula ceſſant.*

But there are ſeveral antient Writers that make it appear, that they continued above 400 Years after; and the Eccleſiaſtical Hiſtory tells us, that *Julian* the Apoſtate, conſulting an Oracle, could receive no Anſwer, becauſe the Body of *Babylus* the Martyr was entombed nigh the Altar; So that the Devils could not deceive the World ſo much as they had done, when *Chriſt*, the Truth itſelf, was manifeſt in the Fleſh; tho' all Oracles did not ceaſe at that Inſtant, nor were they wholly ſilenc'd but with the Deſtruction of Paganiſm about the Year 451, when the Pagans were, by the Edicts of *Valentinian* III. and *Martianus*, forbid, upon Pain of Death, the publick Practice of their idolatrous Worſhip, and their crafty Impoſtures: Tho' ſome Oracles ceaſed long before the Birth of our Saviour, as in particular the moſt famous Oracles of *Greece*; for the *Perſians* having laid their Country waſte, the Prieſts forſook the Temples, and ſo the Oracles became ſilent.

ORDERS [in *Archit.*] are Rules for the Proportion that is to be obſerved in the erecting of Pillars or Columns, and for the Form of certain Parts belonging to them. And thence Buildings are ſaid to be of ſeveral *Orders*, when the Proportion between the thickneſs of the Columns and their height, and all things requiſite thereto, are different.

The principal *Orders* are five, the *Dorick*, *Ionick*, *Corinthian*, *Tuſcan* and *Compoſit*.

The *Dorick Order* has its Columns eight Diameters in height, and ſhould not have any Ornament, neither in its Capital nor Baſe. The *Aſtragal* and *Liſtel* below the Capital, which is half a Diameter in height, conſtituting Part of the Shank or Body of the Pillar.

The *Ionick Order*, at its firſt Invention, had its Columns only eight Models in height; but afterwards the Antients augmented the height of its Pillars in order to make it more beautiful, and alſo added to it a Baſe that was not uſed before; ſo that then, with its Capital and Baſe, it contained nine Diameters of its thickneſs taken below: The Pedeſtal of it is two Diameters, and about two thirds in height, and the *Capital* is chiefly compos'd of Voluta's or Scrolls, and they are commonly channelled with 24 Flutes.

The *Corinthian Order* is the fineſt and richeſt Order of them all. The length of its Columns, with its Baſes and Capitals, is uſually about nine and a half or ten Diameters, and the Capitals are adorn'd with two Rows of Leaves and eight *Volutas*, which ſupport the *Abacus*.

The *Tuſcan Order* is the moſt ſimple and moſt deſtitute of Ornaments, ſo that it is ſeldom made uſe of except in Vaults, in ſome ruſtick Edifices, vaſt Piles of Building, as *Amphitheatres*, &c.

The *Compoſit Order* or *Roman Order*, is one, the Capitals of whoſe Pillars are compoſed of two Rows of Leaves, like thoſe of the *Corinthian Order*, and of the *Volutas* or *Scrolls* of the *Ionick*. Theſe Columns are commonly ten Diameters in height, and wholly like to the *Corinthian* in all its Dimenſions and Numbers except the Capitals, which have no more but four *Volutas* which take up the whole Space, which is filled both by the Volutas and Stems or Stalks of the *Corinthian Order*.

To theſe *Orders* ſome add the *Attick* and *Gothick*.

The *Attick Order* is a ſmall Order of Pilaſters of the ſhorteſt Proportion, having a Cornice raiſed after the manner of an Architrave for its Entablature.

The *Gothick Order*, which is ſo widely different from the antient Proportions and Ornaments, that its Columns are either too maſſy, in form of vaſt Pillars, or as ſlender as Poles, having Capitals without any certain Dimenſions, carved with the thorny Leaves of Thiſtles, Bear's-foot or Colewort.

Some have endeavoured to increase the Number to twenty, adding to those beforementioned, the *Quarter*, the *Escutcheon*, the *Cappe Dexter* and *Sinister*, *Eumenche Dexter* and *Sinister*, *Chausse Dexter* and *Sinister*, and the *Point*. But these have not been received by Heralds in common. There are these Reasons assign'd why these Ordinaries are called honourable; as 1. Because they have been in Use ever since the Practice of Armoury, immediately after the Partitions. 2*dly*, Because that being plac'd all together on the Escutcheon (which represents the Body of a Man) they intirely cover it, and seem as it were to ward off the Strokes that come from the Hand of the Enemy. The *Chief*, represents the Helmet; the *Wreath*, the Chaplet or Crown that covers the Head; the *Pale*, the Lance or Spear; the *Bend* and *Bar*, the Belt; the *Fesse*, the Scarf; the *Cross* and *Saltier*, the Sword; the *Chevron*, the Boots and Spurs; and the *Bordure* and *Orl*, the Coat of Mail.

If a Person was wounded on the Head in Battle, the King or General afterwards gave him a *Chief*, if in the *Legs*, a *Chevron*; if his *Sword* and *Armour* were coloured with the Blood of the Enemy, a *Cross* or *Bordure*; and thus after a mysterious Manner erected for him an honourable Memorial of what he had done for his King and Country.

Heſiod tells us, *Orion* was the Son of *Neptune* by *Euryale* the Daughter of *Minos*; to whom this Gift was given, to be able to walk upon the Water as upon dry Land. He came to *Chius*, and having overcome *Merops*, the Daughter of *Oenepion*, with Wine, lay with her; *Onepion* coming to the knowledge of this, and being enraged at it, put out his Eyes, and expelled him the Iſland. And he wandring to and fro, at laſt came to *Vulcan* and *Lemnos*, who taking pity of him, gave him one of his Family, by Name *Cedalio*, to be his Guide. *Orion* took this Man upon his Shoulders, that he might direct him in his Way. But the *Greeks* ſay he was the Son of *Penelope* the Daughter of *Icarus*, whom *Mercury* raviſh'd in the Shape of a He-goat, and born in *Arcadia*, whence he was eſteem'd a rural Deity, and the God of Mountains, Woods, and Shepherds.

Plutarch, in a Tract of his Morals, call'd, περὶ τῶν λελοιπότων χρησηρίων i. e. *Why Oracles ceaſe to give Anſwers*, tells us a notable Story, that a Ship ſailing out of *Greece* into *Italy* was becalmed about the *Echinades*, and the Perſons in the Ship hear'd a Voice loudly calling on one *Thamus* an *Egyptian*, who was then in the Ship, who made no Anſwer to the firſt or ſecond Call, but at the third reply'd, *here am I*; then the Voice ſpake again, bidding him when he came to the *Palodes* to make it known that the great God *Pan* was dead, and that, when they came to the *Palodes*, which are certain Shelves and Rocks in the *Ionian* Sea, *Thamus* ſtanding on the Poop of the Ship did as the Voice directed him; whereupon was heard a mighty Noiſe of many together, who all ſeem'd to groan and lament, with terrible and hideous Shriekings. News hereof coming to *Tiberius* the Emperor of *Rome*, he cauſed the learned Men to enquire out of their Books who that *Pan* ſhould be; who anſwered, that he was the Son of *Mercury* and *Penelope*. As I have before given you Tables for making *Hexameter Latin* Verſes, ſo I ſhall here preſent you with one for *Pentameters.*

The Manner of Operation for *Pentameters,* is the very ſame with that of *Hexameters* (which ſee.) Only whereas *Hexameter Verſes* conſiſting of 6 *Words,* do therefore require 6 *Tables, Pentameters,* deduceable from theſe Tables, are to conſiſt but of 5 *Latin Words,* and ſo only require 5 *Figures* to work them thro' their 5 *Tables*: So that any Set of 5 *Figures* work'd thro' *their* reſpective *Tables* (in all Reſpects like as you have been ſhewn in the *Example* of the *Hexameters*) will produce 5 *Latin Words,* which will make a true *Pentameter Verſe,* which will be true *Latin* and good Senſe.

Thus the Figures 1 1 1 1 1 produce
Turpia ſignificant arma maligna mihi
1 9 7 2 3 produce
Turpia procurant acta moleſta mera
3 2 7 9 1 produce
Impia conglomerant acta maligna vides.

And if you are minded to compoſe a Pair of Verſes together, *viz. Hexameter* and *Pentameter,* you muſt ſet down the 2 Sets of Figures, as thus; 6 8 5 1 9 1
8 9 1 5 5
of which Sets of Figures, wrought out by their proper Tables, will be produced the following Verſes.

Peſſima fata tuis prænarrant ſidera nigra,
Tetrica ſignificant aſtra nefanda viris.

Which Sets of Figures, if placed backwards, will produce quite different Verſes.

By theſe Tables, between two and three hundred thouſand *Hexameter* Verſes may be produced.

The Verſifying Tables for PENTAMETERS.

2. The *Peripateticks*, who explained the Nature of Things by *Matter*, *Form* and *Privation*; by *elementary* and *occult Qualities*; by *Sympathies*, *Antipathies*, *Faculties*, *Attractions*, &c. But theſe did not ſo much endeavour to find out the true Reaſons and Cauſes of Things, as to give them proper Names and Terms, ſo that their Phyſicks is a Kind of *Metaphyſicks*.

3. *Experimental Philoſophers*, who by frequent and well made Trials and Experiments, as by Chymiſtry, *&c.* ſought into the Natures and Cauſes of Things: And to theſe almoſt all our Diſcoveries and Improvements are due.

4. *Mechanical Philoſophers*, who explicate all the *Phænomena* of *Nature* by *Matter* and *Motion*; by the *Texture* of their Bodies, and the *Figure* of their Parts; by *Effluvia*, and other ſubtile Particles, *&c.* and in ſhort, would account for all Effects and *Phænomena* by the known and eſtabliſhed Laws of Motion and Mechanicks; and theſe in Conjunction with *experimental* ones, are the only *true Philoſophers*.

PHILOSO'PHICAL [φιλοσοφικὸς, Gr.] of or pertaining to Phyloſophy.

PHILOSOPHICAL *Egg* [in *Chymiſtry*] a thin Glaſs Veſſel in the Shape of an Egg, having a long Neck or Stem, and uſed in Digeſtions that take up a conſiderable Time.

To PHILO'SOPHIZE [*Philoſophare*, L. of φιλοσοφίζειν, Gr.] to play the Philoſopher; to diſpute or argue like a Philoſopher, to conſider ſome Object of our Knowledge; examine its Properties, and the *Phænomena* it exhibits; to inquire into their Cauſes or Effects and the Laws thereof, according to the Nature and Reaſon of Things, in order to the Improvement of Knowledge.

PHILO'SOPHY [*Philoſophia*, L. φιλοσοφία of φιλέω, to Love, and σοφία, Wiſdom, *Gr.*] the Knowledge or Study of Nature or Morality, founded on Reaſon or Experience.

PHILOSOPHY, the firſt that we find ſtudy'd Philoſophy were the *Ægyptians*, to which they gave ſo great an Air of Myſtery, that the People did it Reverence as they did their Religion. For the Prieſts out of Deſign to ſurpaſs the Capacity of the Vulgar, and diſtinguiſh themſelves from the Multitude, veiled their Obſervations under Figures and Hieroglyphicks. But as they had no Way of communicating but Tradition, and were not very ready to communicate it to Strangers, ſo we have little certain Knowledge what their Philoſophy was; the *Grecian* Philoſophers were the firſt that communicated, and left behind them to Poſterity any ſuch Pieces of Philoſophy, as would give any clear Knowledge of their Principles and Inquiries. Thoſe that apply'd themſelves to the Study of the Motions of the Heavenly Bodies, in Order to diſtinguiſh their Periods and Revolutions, and to form the firſt Draught of an univerſal Syſtem, and to diſcern the Obliquity of the Ecliptick, and lay open the Secrets of natural Things, were *Thales*, *Anaximander*, *Anaxagoras*, *Heraclitus*, *Hippocrates*, *Democritus*, *Empedocles*, and *Archelaus*. The two great Founders of Philoſophy were *Thales* in *Greece*, and *Pythagoras* in *Italy*.

Socrates and *Plato* were indebted to *Thales* for moſt of their fine Notions. *Thales* was the firſt who began to reduce the confuſed Ideas of his Predeceſſors into ſome Method and Order; and *Socrates* trac'd out the Plan of Logick and Morality, and ſupply'd Principles to Phyſicks. *Plato* was the Diſciple of *Socrates*, and laid down the Plan of moral Philoſophy: He firſt taught that true Philoſophy conſiſted more in Fidelity and Conſtancy, in Juſtice and Sincerity, and the Love of our Duty, than on a great Knowledge and Capacity. *Ariſtotle* was Diſciple to *Plato*, and was the firſt that collected the various Parts of Philoſophy, in Order to caſt them into a regular Syſtem, and was by that Means and his vaſt Diſcoveries, the moſt ſerviceable of all the Antients to Philoſophy in the general.

After *Ariſtotle*'s Time Philoſophy degenerated, and the Purity of its firſt Originals were corrupted by the Multitudes of Sects of Philoſophers that ſprung up. For, as *Pere Rapin* ſays, *Zeno*'s School was fill'd with falſe Virtues, *Epicurus*'s with real Vices. Philoſophy became impious under *Diagoras*, impudent under *Diogenes*, ſelfiſh under *Democrates*, railing under *Lycon*, voluptuous under *Metrodorus*, fantaſtical under *Crates*, drolling under *Menippus*, Libertine under *Pyrrho*, litigious under *Cleanthes*, turbulent under *Archeſilaus*, and inconſtant under *Lachydes*. In ſhort, Philoſophy became abandoned to all the Extravagancies that

can

can enter into the Mind of Man to imagine. The old *Platonick* School was by the new debas'd into the Tribe of *Sceptick*s and *Pyrrhonians*, whoſe Profeſſion was to doubt of every Thing; and after the Death of *Theophraſtus*, the Order of *Peripateticks* cool'd very much in their Application to natural Things, preferring the Purſuit of Eloquence to them: Thus Philoſophy declin'd in *Greece*. But after the Death of *Alexander*, the Kings of *Ægypt* and *Pergamus* became Encouragers of Learning; and after one of the *Ptolemy*'s had baniſh'd the Profeſſors of Philoſophy from *Alexandria*, they return'd to *Greece*; and the *Romans* beginning then to flouriſh, there was a ſhort lucid Interval of Learning at *Athens*; where flouriſh'd *Panætius*, *Polybius*, *Carneades*, *Clitomachus*, *Apollonius*, and *Milo*.

Athens being at that Time the Academy for all the *Roman* Youth of Quality, from thence the *Romans* fetch'd their Philoſophy. The firſt of the *Romans* that explain'd their Philoſophy in Writing was *Lucretius*; alſo *Terentius Varro*, *Quintilian*, and *Cicero*. Toward the latter End of the Reign of *Auguſtus*, *Ptolemy* of *Alexandria* eſtabliſhed a new Sect in *Rome*, chooſing out the more rational Parts of all the other Syſtems, and re-uniting them with his own. During the Time of *Caligula*, *Nero*, and *Domitian*, the tyrannical Emperors of *Rome*, all Profeſſors being baniſh'd from *Rome*, Philoſophy declin'd inſtead of advancing. There was indeed *Seneca*, but he was more of a Courtier than a Philoſopher; but *Plutarch* reviv'd the philoſophical Spirit in the Times of *Adrian* and *Trajan*; and *Pliny* went farther than any Man before him.

So that not many Years after, the Emperor *Antoninus* ſo purſued philoſophical Studies, as to obtain the Name of *Philoſophus*. Then flouriſhed *Epictetus*, *Arian*, *Galen*, *Diogenes*, *Laertius*, *Herodes Atticus*, *Pauſanias*, *Aulus Gellius*, *Ptolemy* the Aſtrologer, *Maximus* of *Tyre*; and about the ſame Time *Taurus* of *Berytus*, *Athenæus*, *Alexander Aphrodiſæus*, *Apuleius*, and *Porphyry*, who for a long Time kept Philoſophy in Faſhion. But *Lucian* finding it in a State of Corruption, compared to what it had been, fell foul of the Profeſſors: But when the Light of the Goſpel began to prevail, then the Chriſtian Philoſophy began to dart its Rays, and the Fathers of the Church ſet themſelves about the Study of Philoſophy, that they might be able to vanquiſh the Heathens by their own Weapons. Among theſe were *Juſtin Martyr*, *Clemens Alexandrinus*, *Tertullius*, and *Euſebius*. To theſe we may add *Pantænus*, *Celſus*, *Lactantius*, *Arnobius*, *Gregory Thaumaturgus*, and *Ammonius*, who was the firſt that taught the Philoſophy of *Ariſtotle* in the Chriſtian Schools. So *Baſil* is reported to have been the ableſt Logician in his Time: *Chryſoſtom* eminent as well for Philoſophy as Eloquence; and St. *Auſtin*, who compos'd a Syſtem of Logick; and many more that might be annexed. When the *Barbarians* over-ran both the Eaſtern and Weſtern Empires, all Learning and Philoſophy ſhared in the ſame Fate with the Government; and the *Saracens*, who over-ran moſt of the Eaſtern, and good Part of the Weſtern Empire, diſſeminated that little Learning they had among them on the conquered, and by (as *Pere Rapin* ſays) fixing too cloſely on the Text and Letter of *Ariſtotle*, got an abſtracted Way of Reaſoning, that was ſomething different from the Solidity of the *Greeks* and *Romans*; which tho' it appeared to have in it great Sagacity, yet was falſe and full of wild Conceits, as will appear by the Works of thoſe *Arabian* Philoſophers, *Avicenna*, *Alkindus*, *Algazel*, *Averroes*, *Alpharabius*, *Albehaſen*, &c. *Averroes* followed *Ariſtotle*, and *Avicenna*, *Plato*; *Ludovicus Vives* cenſures the Metaphyſicks of *Avicenna*, and the Philoſophy, as the Dreams of a roving Imagination, and a-Kin to the *Alcoran*.

After the *Arabians* came the Schoolmen, who framing their Genius on *Arabian* Comments, thence the School Philoſophy became ſo ſubtle and knotty. Of this Sect *Thomas Aquinas* is accounted the Founder. Had this School Philoſophy died in thoſe Countries where Superſtition and Sophiſtry were buried, well had it been: But when true Religion and Learning reviv'd with the Reformation, School Divinity was induſtriouſly cultivated; which ſeems to have been calculated for the Continuance of the Darkneſs of Popery, becauſe it rather perplexes than explains Things: And had it not been for the Subtilties of the Schools, the ſmalleſt Ray of Chriſtian Light might have ſufficed to have attracted the Eyes of ſincere Chriſtians.

The School-Men who come under the Name of Philoſophers, were *Lanfranc*, whom *William* the Conqueror made Archbiſhop of *Canterbury*, *Abelard* and *Peter Lombard*, &c. who framed the rude Draught of this Sect from *Johannes Damaſcenus*. And this laſt mentioned is ſaid to have been the firſt that eſtabliſhed Tranſubſtantiation in the Church of *Rome*, in the Form it is now eſtabliſhed. So this being probably accommodated to that and other Extravagancies in Popery, we may eaſily perceive what a fine new Philoſophy it was: This Philoſophy was perfected, and reduc'd to the Scholaſtick Way and into Form by *Thomas Aquinas*. And, like the *Platonick* Sect, it has been divided into three Periods, the *old*, the *middle*, and the *new*: The moſt conſiderable of the firſt Period was *Alexander* of *Hales*, an *Engliſh* Man; this laſted about 200 Years. *Albertus Magnus* began the ſecond, and the *Ariſtotelian* Doctrine was carried to its Height by *Thomas Aquinas*, and *John Duns Scotus* an *Engliſh* Man. This laſted about an hundred Years. The third Scholaſtick Sect was begun by *Durandus*, and laſted about 100 Years.

Of theſe Scholaſtick Philoſophers, *Pere Rapin* ſays, proceeded that dead Weight of Sums and Courſes, that ſtifled all the Remains of good Letters in the World.

But while theſe Sums and Sentences were erecting by the School-Men, three other Philoſophers ſtart up; who forſaking the Scholaſtick Rules, ſet up a Method quite oppoſite, as *Lully*, *Cardan*, and *Paracelſus*; *Lully* having by his Commerce with the *Arabians* accompliſh'd himſelf with a good Share of Knowledge in Philoſophy, Aſtronomy, and Phyſick, out of them compos'd a fourth, that is Chymiſtry. *Cardan*, he brought the dark Cabaliſtical Learning upon the Stage; and *Paracelſus* was for framing a new *Philoſophy*, a new *Phyſick*, and a new *Religion*, affecting to be myſterious, and even unintelligible.

In the thirteenth Century the Cabaliſtical occult Philoſophy came into Vogue, being introduc'd or cultivated by *Cornelius Agrippa*, *Armand de Villeneu*, and *Petrus de Oppino*, who it is very probable were greater Cheats than they were Conjurers, as ſome have accounted them.

Mechanical PHILOSOPHY, was that which the moſt antient of the *Phœnician* and *Greek* Philoſophers have adhered to, in Order to the Explication of the *Phænomena* of Nature; they made uſe originally of no other Principles than the Conſideration of *empty Space*, the *Doctrine of Atoms*, and the *Gravitation of Bodies*. Theſe ſilently attributed the *Cauſes of Gravity* to ſomething which was plainly diſtinct from Matter.

But our moſt modern natural Philoſophers did not take in this *Cauſe* in their Inquiries into Nature.

They avoid aiming at any Hypotheſis, in Order to explain the *Phænomena* of natural Effects, but leaving the Philoſophy of Cauſes to Metaphyſicks, they rightly conſidering that it is the chief End, Deſign, and Buſineſs of natural Philoſophy to conſider Effects, and by reaſoning upon them and their various *Phænomena*, to proceed regularly at laſt to the Cauſes of Things, and eſpecially to the Knowledge of the *firſt Cauſe*.

And it is certain that all true Progreſs and Proficiency in this Kind of Natural Philoſophy, if it don't immediately lead us to the Knowledge of the firſt Cauſe, yet it will bring us ſtill nearer and nearer to it.

PLANETS, are wandering Stars or Bodies: Their ſecond or proper Motions from Weſt to Eaſt are not regular as thoſe of the other Stars are, nor do they always keep at the ſame Diſtance one from the other; but are ſometimes nearer and ſometimes farther off, and ſometimes joined, being obſerv'd under the ſame Point of Heaven, and ſometimes oppoſite.

Some turn about on their Axis, at ſeveral Times, and theſe Planets which may be imagined to be like our Earth, are opaque Bodies, and receive Light from the Sun, and reflect it; for there is none of the Planets, except the Sun that ſhines with his own Light, but he enlightens the Planets.

The Planets are lower than the fixed Stars. This appears in that they ſometimes eclipſe them and hide their Light from us.

There is a great Difference between the Planets as to their Luſtre. The *Sun* appears of a gold Colour; the *Moon* of a ſilver Colour; *Venus* very white, brillant, and luminous; *Jupiter* is not ſo white and luminous; *Saturn* appears of a pale lead Colour, and does not ſeem to ſhine; *Mars* is as red as Fire, and glances very much; *Mercury* is of a bright ſilver Colour, and glances but little, is not often ſeen in our Climate, becauſe of the Obliquity of the Sphere, and he being near the Sun, for which Reaſon he is always obſcur'd by or plung'd in its Rays, or the Vapours of the Horizon; but it is frequently ſeen in the torrid Zone, becauſe in thoſe Places the Sphere is not in ſo oblique a Poſition.

The Planets are diſtinguiſh'd into great and ſmall.

St. *Paul*, in the Epiſtle to the *Corinthians*, ſpeaking of the Reſurrection of the Dead, gives us an Example both of the Figure *Prolepſis* and the *Upobola*, which is its Anſwer, thus; *But ſome Men will ſay, how are the Dead raiſed up? And with what Body do they riſe?* The Upobola, *Thou Fool, that which thou ſoweſt is not quickened, except it dies, and that which thou ſoweſt, thou ſoweſt not the Body that ſhall be, but the Seed only, as that of Wheat or ſome other Grain.*

He remained in this Condition, till *Hercules*, by his Virtue and Valour, releaſed him.

Some interpret this Fable thus, That *Prometheus* taught the Way of fetching Fire out of Stones, by ſtriking them together, and thence is ſaid to have fetched Fire from Heaven. And that he had his Abode on Mount *Caucaſus*, from whence he continually beheld the Stars, and ſtudied their Motions and Influences, and thence they gave it out, that he was bound to this Mountain. And as to the Eagle conſuming his Liver, is ſignified how the Thought of his Studies, did, as it were, prey upon him.

Bochartus imagines that this Fable is derived from the Signification of the Word *Magog*, and that was the Name of *Prometheus*, which ſignifies a Heart devoured and conſuming with Cares or otherwiſe.

Others ſay, *Prometheus* was a wiſe Man, who ſtudied the Stars, on the higheſt Part of Mount *Caucaſus*, and that by his putting heavingly Fire into his Clay Man, is meant, his inſtructing the Dead, clayey Carcaſes of Mankind with Wiſdom, and that the inward Trouble he had to accompliſh his Deſire, might be compared to a Vulture gnawing his Entrails.

There are 16 Steps to the Door. The Entrance is ſquare and even all along. This Walk leads to two more: At the End of one of them is a Hall, where is an empty Tomb of one Stone, like Porphyry, made, as ſome ſay, for that *Pharaoh* which purſued the *Iſraelites* into the *Red-Sea*. At the End of the other Walk, or Alley, there is a Hole made, as is probable, to let the Bodies down to the Caverns below. The two *Pyramids* which are lock'd, are much after the ſame Form. At ſome Steps of the open *Pyramid*, is an Idol, which *Pliny* calls *Sphinx*, but the *Arabs* call it *Abin el haboun*, being a Buſtal of one Stone, cut out of a natural Rock, repreſenting the Face of a Woman, of a prodigious Bigneſs. It is 26 Foot high, and 15 from the Ear to the Chin. On the Top of the Head there is an Hole, through which a Man might paſs, that reaches down to the Breaſt, and ending there. Being placed upon the *Tripos*, ſhe receiv'd the divine *Afflatus* in her Belly, and began immediately to ſwell and foam at the Mouth, tearing her Hair, cutting her Fleſh, and in all her other Behaviour appeared like one phrenetick and diſtracted, eſpecially if the Spirit was ſullen and malignant; but if it was in a kind and gentle Humour, her Rage was not ſo violent.

QUA'LITY [among *Logicians*] is the third of the Categories, of which, according to *Ariſtotle*'s Diviſion, there are four Sorts: The firſt of which comprehends *Habitude*: *Which ſee.* The ſecond comprehends *natural Powers*: *Which ſee.* The third comprehends *ſenſible Qualities*: *Which ſee.* The fourth comprehends *Form* and *Figure*: *Which ſee.*

QUA'LITY [in *Phyſicks*] the Affection of a Thing whence it is denominated ſuch; or that which cauſes a Thing to affect our Senſes in this or that Manner, and gives it this or that Denomination.

The four firſt QUA'LITIES [in *Phyſicks*] are Heat, Cold, Moiſture, Dryneſs.

The four ſecond QUA'LITIES [with *Chymiſts*] Volatility, Fixity, Corroſiveneſs, and Corruptibility.

Occult

Occult QUA'LITIES [in *Phyſicks*] certain latent Powers ariſing from the ſpecifick Forms of Things; a Name the Antients gave to thoſe *Phænomena*, of which, according to their Principles, on rational Account could be given.

Senſible QUA'LITIES [in *Phyſicks*] are ſuch as ariſe from certain Modifications of the Matter, and are the more immediate Objects of our Senſes.

Primary ſenſible QUA'LITIES, are ſuch as are found in all Bodies, or which agree to all Matter, conſidered as Matter, ſuch are *Extenſion*, *Figure*, *Motion*, *Reſt*, *Solidity*, *Impenetrability* and *Number*.

Secondary ſenſible QUALITIES, are ſuch as reſult from a Compoſition or Mixture of the Elements; as *Light*, *Heat*, *Cold*, *Colour*, *Sound*, *Taſte*, *Smell*, *Hardneſs*, *Softneſs*, *Fluidity*, *Firmneſs*, *Roughneſs*, *Smoothneſs*, *Tranſparency*, and *Opacouſneſs*.

Spiritual QUA'LITIES, are the Qualities of the Soul, or thoſe Affections of the Mind, as it is in this or that Habitude, or Diſpoſition, as, Knowledge, Opinion, Certainty, Doubting, *&c.* all moral Virtues and Vices.

Corporeal QUA'LITIES, according to the *Peripateticks*, are Things diſtinct from the Bodies themſelves; and are ſuperadded to them, or flow from their ſubſtantial Forms. But the modern Philoſophers explode the Notion of Qualities diſtinct from the Body, and ſay they are no other than the Affections of the Bodies themſelves, as, Figure, Magnitude, Motion, *&c.* of the Parts whereof they conſiſt.

QUA'LITY [in *Metaphyſicks*] is an Accident which influences its Subject after the Manner of an eſſential Form.

Active QUA'LITIES [with *Philoſoph.*] ſuch as by Virtue whereof Operations are actually produced on other Bodies, duly diſpoſed in reſpect thereunto; as, the *Heat* of *Fire*, the *Moiſture* of *Water*.

Real QUA'LITIES [in *Phyſicks*] are thoſe which remain in the Subject, and only act on Bodies adjacent to them; as Fire in a Piece of Iron not ignited, *&c.*

Intentional QUA'LITIES [in *Phyſicks*] are ſuch asiſſue from the Subject, and operate at a Diſtance, as Light from the Sun.

Continual QUA'NTITY [in *Metaphyſicks*] is a Quantity whoſe Parts are joined together by a common Term. Quantity is an Accident, by which a material Subſtance is intended. The Species of *continued Quantity* are a *Line*, a *Superficies*, and a *Body*: For Quantity is extended, either into *Length* only, and then it is call'd a *Line*, tho' not a material one, but ſuch as the Mind can frame by *Idea*; or elſe it is extended into Length and Breadth, and that is called a *Superficies*; or elſe into Length, Breadth, and Depth, and that makes a Mathematical Body, which is not to be underſtood as if it were a corporeal Subſtance.

Divided QUA'NTITY [in *Metaphyſicks*] is a Quantity, the Parts of which are not link'd together by a common Term, but are divided, as Number, that may be defined a Multitude of Units.

Moral QUA'NTITY, is that which depends on the Manners of Men, and the free Determination of their Wills, as, *the Prices and Value of Things*; *Degrees of Dignity*, *Good and Evil*, *Rewards and Puniſhments*, &c.

Natural / *Phyſical* } QUANTITY [in *Phyſicks*] is that which Nature furniſhes us with in Matter and its Extenſions, or in the Powers and Forces of natural Bodies, as, *Gravity*, *Motion*, *Light*, *Heat*, *Cold*, *Rarity*, and *Denſity*.

QUA'NTITY *of Matter* [in any *Body*] is the Product of the Denſity into Bulk, or a Quantity ariſing from the joint Conſideration of its Denſity and Magnitude.

QUA'NTITY *of Motion* [in *a Body*] is its Meaſure ariſing from the joint Conſideration of the Quantity of Matter in, and the Swiftneſs of the Motion of that Body.

Notional QUA'NTITY, is that which ariſes from the Operation of the Underſtanding only, ſuch as the Largeneſs and Narrowneſs of the Capacity of the Mind and its Conceptions.

Succeſſive QUA'NTITY, is that which is apply'd to Time and Motion.

QUA'NTITY [with *Gramm.*] the Meaſure or Magnitude of the Syllables, or that which determines them to be called *long* or *ſhort*.

QUA'NTITY [among *Logicians*] the ſecond Category, is either *Diſcrete* or *Continued*: *Diſcrete*, when the Parts are not bound together, as Number; *Continued*, when they are bound; and then it is either *ſucceſſive*, as Time and Motion; or *permanent*, which is that which is otherwiſe call'd Space or Extent, in Length, Breadth, and Depth; the Length alone makes the Line, the Length and Breadth the Surfaces, and all three together the Solids.

Poſitive QUANTITIES [in *Algebra*] are thoſe which are greater than nothing, and which have the Sign + prefixed.

Negative QUANTITIES [in *Algebra*] are ſuch as are leſs than nothing, and have this Sign — prefixed.

Rain [ɲen, of ɲenian. *Sax.*] a Vapour drawn by the Sun, and falling to the Earth in Drops.

Rain is formed of the Particles of Vapours, joining together, which, being joined, fall down to the Earth. The Difference between *Dew* and *Rain* ſeems chiefly to be this, That *Dew* falls at ſome particular Times, and in very ſmall Drops, ſo as to be ſeen, when it is down, but is ſcarce perceivable while falling; whereas *Rain* is groſſer, and falls at any Time.

There are ſeveral Cauſes, that may ſingly, or jointly, produce *Rain*.

1. The Coldneſs of the Air may make the Particles of the Clouds to loſe their Motion, and become leſs able to reſiſt the Gravity of the incumbent *Air*, and of conſequence to yield to its Preſſure, and fall to the Ground.

2. The Vapours may be gathered by the Wind in ſuch Abundance, as firſt to form very thick Clouds, and then ſqueeze thoſe Clouds together, till the watery Particles make Drops too big to hang any longer in the *Air*.

3. When the Vapours ariſe in ſo great Abundance, as to reach and mingle with the Clouds above them, then they cauſe *Rain* in very large Drops; and this may happen in ſtill ſultry Weather, becauſe then the *Clouds* having no ſenſible Motion, and in the mean Time the *Heat* filling the *Air* with Vapours, they joining with the Clouds, and being ſtopp'd in their Progreſs, do open a Paſſage for the Stores of the Clouds to deſcend upon the Earth.

4. Sometimes the warm Wind thaws the frozen Clouds into Drops, as we ſee Snow diſſolved by Heat. Now the thicker and ſooner any ſuch Cloud was gathered, the larger the Drops will be, becauſe there was greater Store of Vapours condenſed there. And hence it is, that in Summer Time, we have ſudden Showers of Rain in exceeding great Drops. See *Snow* and *Hail*.

1. A *Rainbow* never appears but in a Place oppoſite to the Sun, ſo that when we look directly at it, the Sun is always behind us.

2. When a Rainbow appears, it always rains ſomewhere.

3. The conſtant Order of the Colours of the Rainbow, is, the outmoſt is red, or Saffron Colour; the next is yellow, the third is green, the fourth or inmoſt is violet or blue.

4. The Rainbow is always exactly round; but does not always appear equally intire, the upper or lower Parts being often wanting.

5. Its apparent Breadth is always the ſame.

6. Thoſe that ſtand upon the plain low Ground, never ſee above half the Circle of the Rainbow, and frequently not ſo much.

7. The higher the Sun is above the Horizon, the leſs of the Circle is ſeen, and *vice verſâ*, if there be no Clouds to hinder.

8. No Rainbow appears, when the Sun is above 41 Degrees 46 Minutes high.

9. Sometimes two Rainbows appear together, of which one is higher and larger than the other, and ſhews the Colours aforeſaid; but in an inverted Order, and much paler.

10. A Rainbow may be ſeen in the Night, at the Full-Moon, affording the ſame Appearance as from the Sun, but differing in Colour.

11. The Rainbow does not appear the ſame to all Perſons; but every one ſees his particular Bow, according to the Poſition he ſtands in.

Sa'crifice [*ſacrificum* of *ſacra*, holy Things, and *facio*, L. to perform] an Offering made to God on an Altar by a regular Miniſter, as the Payment of Homage, *&c.*

Writers ſay that the Devils being Enemies to God and his Glory, from the Malignity of their Natures, were not content with the Offerings of the Fruits of the Earth, and of all manner of Creatures that were uſually ſacrific'd to them, but were ſo barbarous as to require human Victims, *viz.* Men and Women, to be butcher'd and burnt alive upon their Altars.

The *Romans* did ſometimes dedicate their young Infants to the Houſhold-Gods, the Gods of the Family. The *Scythians*, that inhabited about that Part call'd *Taurica*, were wont to Sacrifice to their *Diana* all Strangers that came into their Hands. Many Damſels were beaten to Death with Bundles of Rods at an Altar of *Bacchus* in *Arcadia*. The *Germans* and *Cimbri* were wont cruelly to torment Men, and afterwards to ſacrifice them. The Inhabitants of the moſt Northern Climates were wont to make a Feaſt for their Aged, and crown them with Garlands, and afterwards caſt them down from an high Rock into the Sea; and others threw them off from Bridges into Rivers; whence they were called *Senes Depontani*. And *Cæſar*, in his Commentaries, relates, that the antient *Gauls* uſed to dreſs up a huge Statue made of Branches of Ozier, having filled it with living Perſons, to burn it to their Idols. The *Egyptians* and Inhabitants of *Paleſtine* offered their own Children to their Gods, and the *Iſraelites* themſelves ſo far imitated their Barbarities, as to cauſe their Children to paſs between two Fires, till they were miſerably ſcorched; and they alſo ſhut them up in a hollow Idol of Braſs, call'd *Moloch*, made red-hot, and while theſe innocent Victims were in this Manner tor-

mented, they ſounded Trumpets, beat Drums, &c. to drown their Outcries. Thence the Place was named *Tophet*, *i. e.* a Drum. And *Ahaz* and *Manaſſeh*, Kings of *Judea*, were ſo wretched as to cauſe their own Children to paſs thro' the Fire to *Moloch*.

In Sacrifices to Idols, a Choice of Animals was made according to the Diſpoſitions of their Gods: For *Mars* is ſuppoſed to have lov'd no Creatures but ſuch as were furious and warlike, as the Bull, &c. and *Neptune*, the Bull and the Horſe. The He-goat was dedicated to *Bacchus*, becauſe it is propenſe to ſpoil Vineyards; *Ceres* and *Juno* had Cows offered in Honour of them; *Diana*, She-goats; and *Faunus*, Kids.

The Ceremonies obſerv'd in their Sacrifices were theſe; They were carefully to obſerve, if the Victim had any Blemiſh; if ſo, it was rejected, and another taken, and the Prieſt took a Lump of burnt Corn and Salt, and ſometimes Meal mingled with Salt, and threw it on the Victim; and when they had kill'd the Beaſt, they laid it on the Fire, and thoſe that offer'd it held their Hands upon it, and prayed with the Prieſt, and then poured Wine into the Fire: If it were a *Holocauſt*, i. e. a whole Burnt-Offering, the whole was conſumed in the Flames: But if not, Part of it was laid aſide for the Prieſts and thoſe that offered it.

Then they danced round the Altar, ſinging Hymns and Songs in Honour of the Deity to whom it was offered. Theſe Hymns conſiſted of three Parts, or Stanza's; the firſt was ſung in turning from Eaſt to Weſt; the other in turning from Weſt to Eaſt; and the third Part they ſung ſtanding before the Altar.

The Superior Gods had their Altars in eminent Places, and their Temples built on ſuch high Ground, that they might, without any Impediment, receive the firſt Rays of the riſing Sun. The Prieſt wore a Gown, either white or purple; and, before he approach'd the Altar, waſh'd his Hands in pure Water, fancying that this Waſhing cleanſed the Soul, and rendered it acceptable to the Gods. The Prieſt then, having his Head adorned with Garlands and Ribbons, led the Beaſt adorned in like Manner to the Altar, being follow'd by a Crowd of People adorn'd with Crowns made of ſuch Trees as were ſuppoſed moſt acceptable to the God. The Victim ſtood by the Altar a ſmall Time, while the Prieſt offered a ſet Form of Prayer to *Janus* and *Veſta*, and then with a Knife mark'd the Beaſt from Head to Tail; and if it was any Thing unruly, and willing to get away, they imagined it was not acceptable to the God, and therefore procured another. After the Performance of theſe and other ſuch like Ceremonies, the Prieſt laid on the Head and Back of the Beaſt the *Mola Salſa*, *i. e.* Meal and Salt mingled with Frankincenſe, and after he and his Aſſiſtants had taſted of a Cup of Wine, he poured the reſt between the Horns of the Beaſt, and pulling a few Hairs from the Place, threw them into the Fire; then the Beaſt was ſlain, either by knocking down or cutting his Throat, and flead; then the Soothſayer with a long Knife turned the Bowels up and down, for it was unlawful to touch them with his Hands, and having made his Obſervations, and given his Judgment of them, they were preſented to the Deity on a Launce, or if to a Sea-God thrown into the Waves; then the Prieſt threw Frankincenſe into the Fire with Wine, and took a Part of every Member which his Miniſters had cut out into a Platter, and caſt them into the Flames; and while they were burning, he and the Offerers made Prayers to the God, holding their Hands upon the Altar, and afterwards retired with the Aſſiſtants to feaſt upon the remaining Part of the Beaſt, ſinging the Praiſes of the Deity. After they had eaten, they returned back to the Altar, and caſt into the Flames the Morſels of Meat that they had left, with the Tongue and ſome Wine, with Thanks to the Deity for the Honour and Advantage of ſharing with him in the Victim offered to him.

To the ſuperior Gods they pray'd ſtanding, but to the infernal, ſitting.

The Gods of the Air were adored with Muſical Inſtruments, and melodious Songs, more than the former.

The Sea-Gods were worſhipped near the Sea, and the Blood of the Victim was poured into the ſalt Water.

The Sacrifices to the infernal Deities were performed in the Night. The Beaſts were black, and offered in ſome Cave, or dark Place, except it were to *Pluto*.

The Nymphs and Divinities of the Field had Milk, and Honey, and Wine offered to them in their Sacrifices; the Male Deities had uſually Male Beaſts offered to them, and the Goddeſſes Females.

What he had taken from him, he cast into the Sea, where, by a continual Agitation of the Waves, it found a favourable Womb among the Froth, and thence the Goddess *Venus* was produc'd.

Saturn had an elder Brother named *Titan*, to whom the Kingdom of the World did of Right belong; but he, by the Persuasions of his Mother *Vesta* and his Sister *Cybele*, resign'd the Scepter to *Saturn* for his Life, upon Condition that he should not suffer any of the Male-Children to live, that the Empire of the World might devolve to his Posterity after the Death of *Saturn*.

For this Reason, *Saturn* is said to have devoured his Male-Children; but his Wife *Cybele* saved *Jupiter* and *Juno*, by conveying them away, and *Neptune* and *Pluto*, who were privately nourish'd by their Mother, and sent him a Stone wrapp'd in Swaddling-Clouts instead of a Child, which he greedily devoured in the dark. But *Apollodorus* says, that he did swallow *Neptune* and *Pluto*; and that, when *Jupiter* was of Age, he married *Metis*, the Daughter of *Oceanus*, who gave a Drink to *Saturn* that made him vomit them up; whereupon *Titan*, seeing his Expectations frustrated, made War upon *Saturn* with the Assistance of his Sons, and having vanquish'd him, clapp'd him up into Prison, and there kept him, till his Son *Jupiter* became of Age, and deliver'd him thence. But *Saturn* having learn'd by some Oracle, that one of his Sons should take his Scepter and Kingdom from him, resolv'd to lay Snares to destroy his Son *Jupiter*; but he, taking Arms against his Father, cast him out of his Kingdom and Empire of Heaven; whereupon *Saturn* retired to *Italy* to hide himself, which was thence call'd *Latium a latendo*. (*Bochartus* applies this Story to *Nimrod*'s Usurpation of the supreme Power.) *Janus*, the King of *Italy*, is said to have received *Saturn* with all Civility and Respect.

Saturn is said to have brought upon the Earth the *Golden Age*, when the Ground yielded all Sorts of Fruits, without Labour and Tillage, when *Astræa* or Justice manag'd the Affairs of Men, and they liv'd together in a perfect Love and Amity. The four Ages mention'd by the Poets were the *Golden* under *Saturn*, or *Noah*; the *Silver* under *Jupiter*, or the Posterity of *Noah*; the *Brazen* under *Nimrod*; and the *Iron*, which yet continues.

The learned *Bochartus* endeavours to prove that *Saturn* is *Noah*, and that all the Fables of him are Delineations of his true History; The three Sons of *Saturn*, that divided the Empire between them, are equal to the three Sons of *Noah*; the youngest *Ham*, he proves to be *Jupiter*, *Japhet*, to be *Neptune*, and *Shem* to be *Pluto*; and that their different Governments have a Relation to the Places they have inhabited. And that *Ham* going into *Egypt* and *Lybia*, being hot Places, is said to have possessed Heaven; and that *Japhet* going into *Europe*, and the *Islands*, they feigned him God of the Sea, or *Neptune*; and that *Shem* being remarkable for his Piety, his profane Brethren, by Way of Derision made him the God of Hell or *Pluto*.

Gual-

Gualtruchius ſays, that *Saturn*, or Time, is repreſented as an old Senior, with Wings upon his Shoulders, and a Scythe in his Hand, as cutting down all before him; and that he is repreſented as ſwallowing his own Children with hard Stones, becauſe Time eats and conſumes the moſt durable Subſtances.

The Antients painted *Saturn* with ſix Wings, to intimate the Swiftneſs of Time, and Feet of Wool, or, as others ſay, with the Gout, holding in his Hand a Serpent biting his Tail, with a Sickle and an old Garment hanging upon him.

The *Romans* depoſited under his Protection and in his Temple their Treaſure, becauſe in his Reign, *i. e.* in the Golden Age, there was no Theft or Robbery committed; and there they laid up the Rolls of the Names of the *Roman* People, which were made of the Skins of Elephants.

SATURNA'LIA, were feſtival Days obſerv'd in *December* in Honour of *Saturn*; and, as *Bochartus* is of Opinion, took their Original from *Noah*'s Drunkenneſs. Theſe were Times of all Debauchery and Licentiouſneſs, Servants taking upon them to command their Maſters, and Slaves to be unruly, without Fear of Puniſhment.

The Prieſts of *Saturn* were initiated in ſcarlet Robes, to expreſs their Bloody-mindedneſs, and offered to him young Infants in Sacrifice, for which Inhumanity they were all crucified under *Tiberius Cæſar*. And the *Carthaginians* likewiſe did every Year offer to him human Sacrifices, which was the Subject of an Embaſſy from *Rome*; for tho' the *Romans* did mightily honour and eſteem *Saturn*, yet they did not approve that Men ſhould be offered to him. But they ſhew'd him this particular Reſpect, that they cauſed Torches and Tapers to be burning continually upon his Altars.

As to the Original of their Names, Authors differ. *Iſidore* derives the Name *Saxon* from *Saxum*, L. a Stone, they being a hardy and warlike Nation. But the Name *Saxon*, according to the Northern Antiquities, is older even than the *Latin* Tongue itſelf. *Krantzius* derives it from *Aſchanez*, the Son of *Gomer*; but he does not ſupport it by ſufficient Authority. *Goropius Becanus* fetches it from *Sacee*, a People about *Armenia*; but this ſeems to be without any Foundation. But it is moſt probable they were call'd *Saxons*, from the ſhort Swords they commonly wore, called *Saxen* or *Seaxen*; and *Tacitus* ſays, the Northern *Germans* were diſtinguiſhable by a round Shield, and a ſhort Sword, that they wore. Snow [ſnap, *Sax.*] is a moiſt Vapour elevated near to the middle Region of the Air, whence it is thickened into a Cloud, and reduced into the Form of carded Wool, then falling down by little Parcels. The white Colour of Snow proceeds from the Conjunction of Humidity with Cold, which naturally engenders Whiteneſs. If Snow falls in Summer-time, it is cauſed by the high Mountains, which, cooling the lower Region, give Bodies unto Vapours, and cauſe them to deſcend as low as the Earth.

Snow [according to the Learned Dr. *Grew*] as to the Form of it, has many Parts of it of a regular Figure, for the moſt Part being as ſo many little Rowels or Stars of 6 Points, being perfect and tranſparent Ice, as may be ſeen upon a Veſſel of Water; upon which 6 Points are ſet other collateral Points, and theſe always at the ſame Angles, as are the main Points themſelves.

From whence the true Notion and external Nature of *Snow* ſeems to appear, *viz.* That not only ſome few Parts of *Snow*, but originally the whole Body of it, or of a ſnowy Cloud, is an infinite Maſs of Icicles, regularly figured, and not one Particle of it, originally being irregular.

It being a Cloud of Vapours gathered into Drops, which Drops forthwith deſcend; upon which Deſcent, meeting with a ſoft freezing Wind, or at leaſt paſſing through a colder Region of the Air, each Drop is immediately froze into an Icicle, ſhooting itſelf forth into ſeveral Points or *Striæ* on each hand from its Center.

And as to any of them that are not regular in a Star-like Form, it happens thus; that ſtill continuing their Deſcent, and meeting with ſome ſprinkling and intermixing Gales of warmer Air, or, in their continual Motion and Waſtage to and fro, touching upon each other; ſome are a little thawed, blunted, froſted, clumper'd, and others broken.

And theſe, though they ſeem to be ſoft, are really hard, becauſe true Ice, the inſeparable Property of which is to be hard, and ſeem only to be ſoft; becauſe, upon the firſt Touch of the Finger, upon any of its ſharp Edges or Points, they inſtantly thaw, or elſe they would pierce the Fingers as ſo many Lancets.

And tho' Snow be true Ice, and ſo a hard and denſe Body, and yet is very light, is becauſe of the extreme Thinneſs of each Icicle in compariſon of its Breadth.

For ſo, tho' Gold is the moſt ponderous of all Bodies, yet, when it is beaten into Leaves, it rides upon the leaſt Breath of Air; and ſo will all other Bodies where there is but little Matter and large Dimenſions. As to the Whiteneſs of Snow, it is becauſe it conſiſts of Parts, all of them ſingly tranſparent; but being mixed together appear white, as the Parts of Froth, Glaſs, Ice, and other tranſparent Bodies.

As to its Reſidence in the Body, ſome hold that ſhe is in all the Body, and wholly in every Part of it. Others aſſign her Reſidence in the Brain; the Philoſophers and Divines in the Heart. *Ariſtotle* ſuppoſes a Male Body to receive its Soul the 42d Day after Conception, and a Female the 19th. Others ſuppoſe it to be infuſed with the *Semen* itſelf. *Des Chartes* is of Opinion it is infus'd when it is furniſhed with all its Organs, that is, after the Formation of the Belly, Heart, Brain, &c. which Anatomiſts ſay is about the 4th Month.

To SOUND [*ſonder*, F.] to try the Depth of the Waters of the Sea, River, or any deep Water; alſo to pump or ſift a Perſon.

To SOUND *a Ship's Pump*, is to put down a ſmall Line with a Bullet or ſome weighty Thing at the End, to try what Depth of Water there is in the Pump.

SOUND [*ſon*, F. *ſonus*, L.] is a tremulous and waving Motion of the Air, which, being whirled into certain Circles, is moſt ſwiftly waved this Way and that Way.

SOUND [by *Naturaliſts*] is ſuppoſed to be produced by the ſubtiler and more etherial Parts of the Air, being formed and modified into a great many ſmaller Maſſes or Contextures exactly ſimilar in Figure; which Contextures are made by the Colliſion and peculiar Motion of the ſonorous Body, and, flying off from it, are diffuſed all around in the Medium, and do affect the Organ of our Ear in one and the ſame Manner.

It appears alſo, that Sound is not produced in the Air, ſo much by the Swiftneſs, as by the frequent Repercuſſions and reciprocal Shakings of the ſonorous Body.

Sir *Iſaac Newton* demonſtrates that Sounds are nothing elſe but the Propagation of the Pulſe of the Air, becauſe they ariſe from the tremulous Motion of Bodies. Which (ſays he) is confirmed by thoſe great Tremors, that ſtrong and grave Sounds excite in the Bodies that are round about, as the *Ringing of Bells*, *Noiſe of Cannon*, and the like.

He alſo found by Experimenrs, that a Sound moves 968 *Engliſh* Feet in a *Second* of *Time*, which *Second* is but the 60th Part of a Minute.

Merſennus computes that the Diameter of the Sphere of a Sound, heard againſt the Wind, is near a third Part leſs, than when it comes with the Wind. And yet there is one *Phænomenon* of Sounds, that is really wonderful, that all Sounds, great or ſmall, with the Wind or againſt it, from the ſame Diſtance, come to the Ear at the ſame Time.

The following Properties of Sound have been obſerv'd, in which there is a near Relation to Light.

1. As *Light* acquaints the Eye with Figures, &c. ſo *Sound* informs the Ear.

2. As *Light* vaniſhes upon the Removal of a radiating Body, ſo *Sound* periſhes as ſoon as the Undulation of the Air ceaſes.

3. As a greater Light eclipſes a leſs, ſo a greater Sound drowns a leſs.

4. As too great and bright a Light is offenſive to the Eye, ſo too great, loud, or ſhrill a Sound is offenſive to the Ear.

5. Sound moves ſenſibly from Place to Place, as Light does, but nothing near ſo ſwift.

6. Sound is reflected from all hard Bodies, as Light is.

The Reverend Mr. *Derham*, by Obſervations and Experiments, concludes that Sounds may go above 700 Miles in an Hour.

But the *Latins*, who did not commonly use the Article, made the Interjection a Part of Speech; so that they agree in the Number of the Parts, tho' not in the Division, which is *Article, Noun, Pronoun, Verb, Participle, Adverb, Preposition, Conjunction.* The Moderns, as the *French, Italians*, &c. who use the Article, very much follow the *Greek* Division: But the *English* generally follow the *Latin* Division, and make but little use of the Article, except *the* and *a*; the former of which is generally used before a Noun Substantive in the *Nominative* and *Accusative* Cases, and *a* which is a Note of a *Nominative*, only when it is by itself.

Direct SPHERE } [in *Astronomy*] is when both the Poles
Right SPHERE } of the World are in the *Horizon*, and the Equinoctial passes thro' the *Zenith*; so that the Equator and all its Parallels, such as the Tropicks and Polar Circles, make Right-Angles with the *Horizon*, and are divided by it into 2 equal Parts; so that the Sun, Moon, and Stars ascend directly above, and descend directly below the *Horizon*; as at all Places situated just under the Equinoctial Line.

Oblique SPHERE [in *Astronomy*] is such a Situation of the World, as that the Axis of it inclines obliquely to the *Horizon*; one of the Poles being raised any Number of Degrees less than 90 above it; and the other depressed as much below it; so that the Sun and Stars ascend and descend obliquely, and some of them never ascend at all. This Position happens to all Places wide of the Equator.

A Parallel SPHERE, is that Position of the Globe which hath one of the Poles in the *Zenith*, and the other in the *Nadir*, the Equator in the Horizon, and all the Circles, parallel to the Equator, are parallel to the Horizon.

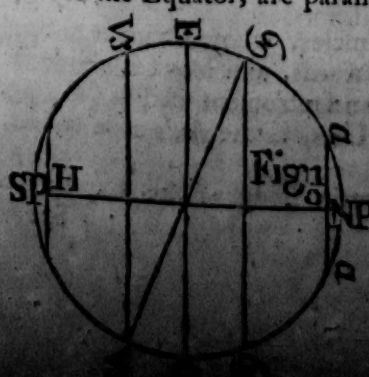

Fig. 1. represents a Right Sphere where the Axis of the Globe coincides with the Horizon; and the Equator *E Q*. and all its Parallels, are equally divided by the Horizon; consequently those, that enjoy that Position, have their Days always equal to their Nights.

In *Fig.* 2. which represents an oblique Sphere for the Latitude of 50 d. North, all the Parallels to the Equator are unequally divided by the Horizon; therefore, their Days and Nights are unequal, except when the Sun is in the Equator, because it is equally divided by the Horizon; therefore, then their Day and Night will be equal.

In *Fig.* 3. the Equator and Horizon are the same; and it is apparent from the Figure, that all the Time the Sun is in the six Northern Signs, he will still appear to describe Circles above, and parallel to the Horizon of the Inhabitants of the North Pole; hence it is called a *Parallel Sphere*; and all the other six Months he will continue under their Horizon.

In each of the preceding Figures, *N. P.* represents the North Pole, and *S. P.* the South, *a a* and *b b* the Polar Circles, ♋ ♋ the Tropick of *Cancer*, and ♑ ♑ the Tropick of *Capricorn*, *Ho.* the Horizon, and *E Q* the Equator, and the Circle surrounding the Whole, a Meridian; the Line that is drawn from Pole to Pole represents the Axis of the Globe.

Sphinx [of σφίγγω, to perplex or puzzle, *Gr.*] was, according to the Poets, a Monster, the Daughter *Echidna* and *Typhon*, having the Face and Voice of a Girl, the Body like a Dog, the Tail of a Dragon, and Claws of a Lion, and large Wings on the Back. This infested the City of *Thebes*, proposing Ænigmatical Questions to those that passed by; and, if they could not presently solve them, it devoured them without Mercy: So that the Country round about was forsaken, and no Body dar'd to venture near the City. The Oracle, being consulted, declared, the only Way, to be delivered from its Tyranny, was to tell the Meaning of the Riddle; the Riddle was this; *What Creature is it that in the Morning walks on four Feet, at Noon on two, and in the Evening on three? Creon*, the King, having caused it to be proclaim'd all over *Greece*, that he would quit his Claim to the Crown, to him that should resolve the Question, it was done by *Oedipus*, as follows; that it was *Man*, who in his Youth went upon all Fours, as Beasts, upon his Hands and Feet; and, when arriv'd to his full Age, upright on his Feet only; and, in old Age, made use of a Staff instead of a third Foot. Upon the Resolving this Riddle, the Monster was so enraged, that in a furious Manner it dash'd its Brains out against a Rock. Some say, this *Sphynx* was a Robber, and that the Ambages of his Riddle were the Windings and Turnings of a rocky Mountain where he haunted, robbing and murdering those that travelled near *Thebes*.

Sphynx [*Hieroglyphically*] was put to signify *Mysteries*, and accordingly was placed at the Entrance of all the Temples of *Egypt*, to intimate, that all the Gods there worshipped were mysteriously represented, and that the common People could never understand the Meaning of all the Images and their Postures without an Interpreter.

Cadmus having an *Amazonian* Wife, whose Name was *Sphinx*, went to *Athens*, and, having slain *Dracon*, seized on the Kingdom, and after that took *Harmonia Dracon*'s Sister to Wife. Therefore when *Sphinx* came to know that he had gotten another Wife, having gain'd over many of the Citizens to her by fair Words, and gotten into her Hands a great deal of Riches, and a very swift Dog, that *Cadmus* used always to have with him, she betook herself to a Mountain, call'd *Sphingius*, from whence she attack'd *Cadmus* in a hostile Manner, made daily Ambushments, and destroy'd many of the Inhabitants of *Thebes*. Now they were wont to call Ambushments αἴνιγματα, *i. e.* Riddles, and this grew a common saying with them, the *Argivan* (*Grecian*) *Sphinx*, propounding some Riddle, tears us in Pieces, and none can unfold the Riddle. *Cadmus*, he caused it to be proclaimed that he would give a great Reward to whomsoever should slay this *Sphinx*; upon this *Oedipus* of *Corinth* coming thither, who was famous for martial Atchievements, and having with him a swift Horse, and some of *Cadmus*'s Soldiers, ascending the Mountain by Night, slew *Sphinx*. And hence the Fable had its Original, *Palæphatus*.

STILE
STYLE } [*ſtilus*, or *ſtylus*, L. σὶλΘ, Gr.]

STILE originally ſignified the Inſtrument or Iron Pen with which the Antients uſed to write, but it is now appropriated to the Manner of an Author's expreſſing himſelf.

Diſcourſe is the Character of the Soul; Men's Words paint out their Humours, and every one follows that Stile to which his natural Diſpoſition leads him; and thence proceeds the Difference in Stile among them that write in the ſame Language; and there is as much Difference in Stile as in Complexion.

A diffus'd STILE, is one that is ſo flowing, that how-muchſoever the Authors may have affected Brevity, yet one half of what they have ſaid may very well be ſpared. Rhetoricians have reduc'd Stiles to three Kinds, the ſublime, the middle, and the low.

A Sublime STILE [among *Rhetoricians*] is one that admits of nothing mean or low. If there be a thouſand Things ſaid well, if there be any Allay of a low Character among them, they will not gain the Character of the Sublime. The Expreſſions muſt every-where be noble, and anſwer the high Idea that we would give of the Subject. There are ſome bold Writers that are very fond of the Sublime, and to that Degree, that they mix ſomething great and prodigious in every Thing they write, without examining, whether there be any Foundation for it in Reaſon.

The ſublime Stile conſiſts in Metaphors and Figures, which are uſed with the utmoſt Liberty. *Virgil*'s Æneids are in the Sublime; he talks of nothing but Battles, Sieges, Wars, Princes, and Heroes; every Thing is magnificent, and the Sentiments, Words, and Grandeur of the Expreſſion anſwer to that of the Subject. There is nothing in the Poem that is common; if he is under a Neceſſity to make Uſe of any Thing that is ordinary, he does it by a particular Turn, by ſome Trope, as for Bread he puts *Ceres* the Goddeſs of Corn.

The middle STILE [among *Rhetoricians.*] There is no great Need of ſaying much in the Deſcription of this Manner of Writing or Stile, becauſe the very Name of it indicates, that it is the Mean between the *ſublime* and the *low* or *ſimple*. *Virgil*'s Georgicks are written in this middle Stile; as he is not in them talking of Battles, and the Eſtabliſhment of the *Roman* Empire, he does not uſe the *ſublime*; ſo, on the other hand, his Matter not being ſo humble as that of his *Bucolics*, he does not deſcend ſo low.

The Matter in theſe four Books being a Search after the hidden Cauſes of Nature, and a Diſcovery of the Myſteries of the *Roman* Religion, in which he mingles Philoſophy, Hiſtory, and Divinity together, he keeps the middle Way between the Majeſty of his *Æneids* and Lowneſs and Simplicity of his *Bucolics*.

The low or ſimple STILE [among *Rhetoricians.*] It is a Maxim that Words muſt agree with Things: The ſimple Stile is to ſpeak as we commonly ſpeak: *Virgil*'s *Bucolics* are in the ſimple Stile, that is, a Stile that does not require Pomp and Ornaments of Eloquence, nor a magnificent Dreſs, but yet it rejects the vulgar Ways of Expreſſion, and requires a Dreſs that is neat and decent. But, though this Stile is called ſimple, it does not mean, that it is vile and contemptible.

But in the ſame Kind of Stile ſome are *ſofter*, ſome *ſtronger*, ſome *florid*, and ſome *ſevere*.

A ſoft STILE, is when Things are ſaid with ſo much Clearneſs, that the Mind is at no trouble to underſtand them: To effect this, every Thing that is difficult muſt be made eaſy, all Doubts prevented, and nothing muſt be left for the Reader to gueſs at. Every Thing ought to be ſaid within the neceſſary Compaſs. The Sweetneſs of Cadence and Numbers does admirably contribute to the Softneſs of Stile, and, when it is tender and delicate, it is extraordinary. The Learned recommend *Herodotus* in the *Greek*, and *Titus Livius* in the *Latin*, as Patterns of this ſoft Stile.

The ſtrong STILE is directly oppoſite to the *ſoft Stile*, it ſtrikes the Mind, and renders it very attentive. In order to give a Stile this Strength, the Expreſſions muſt be conciſe, ſignifying a great deal, and raiſing ſeveral Ideas. Authors in *Greek* and *Latin* abound in ſtrong Expreſſions; and none of the modern Languages have ſo great a Share as the *Engliſh*; the *French* cannot pretend to this conciſe and ſtrong Manner of Expreſſion.

A florid STILE depends in part on the ſoft Stile, and Tropes and Figures are the Marks of it. And *Quintus Curtius*'s Hiſtory is reckoned an Example of it.

The ſevere STILE is what allows not any Thing that is not abſolutely neceſſary; it grants nothing to Pleaſure, ſuffers no Ornaments, baniſhes all Warmth and Emotion, and, when it is carried too far, becomes dry.

A cold STILE [among *Rhetoricians*] is, when Orators make a bad Uſe of Figures; for, though they take never ſo much Pains to move the Auditory, they are heard with a certain Coldneſs and Indifference; as if a Man weeps without a Cauſe, Men laugh at his Tears; if he be angry without Occaſion, his Anger is look'd upon to be either Folly or Madneſs: But, when both are well-grounded, the Perſons preſent fall into the ſame Paſſions.

There may be alſo another diſtinction of STILES, *in reſpect to Arts*; the STILE of the *Orator*, the *Hiſtorian*, the *Dogmatical*, and *Poetical*.

The STILE of an *Orator* ſhould be rich and abounding;

for, that being design'd to enlighten obſcure or doubtful Truths, it will be neceſſary that all the Clouds and Obſcurities, which hide them, ſhould be remov'd and diſpers'd.

The Abounding of the Stile conſiſts not in a Multitude of Epithets and ſynonymous Words and Expreſſions, but in ſuch rich Expreſſions as will make the Reaſons more valuable, and not dazzle the Eyes and Underſtanding. And though Tropes are ſerviceable on this Occaſion, they ought never to dazzle with a falſe Luſtre, or impoſe Falſhood on the Auditory for Truth. The Orator ſhould never be cold or indifferent in any Part of his Oration; a Perſon cannot argue well, if he is unconcern'd for the Succeſs of his Argument: When the Heart does not agree with the Sentiments, the Diſcourſe will languiſh. The Cadence and Number of this Stile ought from Time to Time to be periodical. The Roundneſs of Periods charms the Ear, and affects the Mind; and, when the Periods are pronounced majeſtically, they add Weight to the Matter.

2. *The Hiſtorical* STILE. Hiſtory requires Eloquence as much as any other Subject whatſoever. The chief Qualifications are Perſpicuity and Brevity, and Brevity contributes to the Perſpicuity. It ſhould be curt, free from long Phraſes and Periods, which keep the Mind in Suſpence. It ought not to be interrupted with extraordinary Figures, by thoſe great Emotions which raiſe Paſſion, becauſe the Hiſtorian ought not to ſhew any.

On ſome Occaſions he may let his Eloquence ſhine, becauſe he is ſometimes under an Obligation to report what was ſaid, as well as what was done; and, where Speeches are neceſſary, Figures will be alſo neceſſary to deſcribe the Paſſions of thoſe that ſpeak them.

3. *The Dogmatick* STILE relates to the inſtructing in Mathematical, Phyſical, or Ethical, *&c.* Arts and Sciences. In this Stile there is no Occaſion for Figures to move the Auditor; for it is ſuppos'd he comes with a Mind prepared to learn. No-body is much concern'd for the Truth or Falſity of a Geometrical Propoſition; therefore the Stile ought to be ſimple, dry, and without any Motions, by which the Orator is inſpired by Paſſion. In *Phyſicks* and *Ethicks*, the Stile ought not to be too dry, as in *Geometry* and *Algebra*; becauſe the Matter is not ſo crabbed, tho' they ought not to go too far out of the ſevere Character.

4. *The Theological* STILE ſhould be clear and ſolemn, harmonious and majeſtical.

Tombs were frequently set off with Ornaments and the Effigies of the Deceased in several Postures and Habits, for which antiently there were settled Rules; as,

Gentlemen who died in Battel, and on the victorious Side, were represented with their Helmet on their Head, their Shield on the Left, and their Sword on the dexter Side naked, and with the Point upwards.

Gentlemen who died in Battle, on the vanquish'd Side, were represented on their Tombs without their Coat over their Armour, with their Feet resting on a dead Lion, having their Hands joined on their Breast, their Visor lifted up, and their Sword in the Scabbard. A Gentleman or Knight who had been vanquished or killed in single Combate, was represented in compleat Armour, and his Battle-Ax out of his Arms, and lying by him, and his Left Arm a-cross his Right.

If a Gentleman or Knight had been victorious, he was represented on his Tomb, armed on all Points, with his Right Arm a-cross over the Left, and his Battle-Ax in his Arms.

A Knight or Gentleman that had been accused of Treason, Murder, or a Rape, or of having been an Incendiary, had no Monument, but was treated in the vilest Manner, his Arms being broken, his Body dragg'd on a Hurdle, and either hung upon a Gallows, or cast out to be devoured by the Fowls of the Air.

The Son of a General or Governor of a Castle, or fortified City, if he died when the Place was besieged, though he was ever so young, was pourtray'd in compleat Armour, with his Head resting on an Helmet, instead of a Pillow.

Clergymen were represented in their Pontifical or Sacerdotal Habits.

TRA'GEDY [*tragœdia*, L. *tragedie*, F. τραγῳδία, Gr.] a lofty Sort of Play, in which great Perſons are brought on the Stage; the Subject-Matter of it is always troubleſome, and the Concluſion of it mournful.

Tragedy is in Imitation of one juſt, great, and probable Action, not told but repreſented; which, by moving Terror and Pity, conduces to purge the Paſſions in the Minds of Men. It it the principal Part of Dramatick Poetry, and the Fable or Deſign is the principal Part of Tragedy.

In *Tragedy*, it is not abſolutely neceſſary that there ſhould be Hiſtorical Truth; but there muſt always be a Veriſimility, and, at the ſame Time, to make it wonderful is one of the moſt difficult Tasks in Poetry.

There are in it three Unities required, *viz.* of Action, Time, and Place; which Unities have been eſtabliſhed by Criticks, to bring the Drama as near Nature as poſſible.

1. *Unity of Action.* Two Actions, that are different and independent, will diſtract the Attention and Concernment of the Audience, and of conſequence deſtroy the Poet's Deſign, which is to move Terror and Pity.

2. *Unity of Time.* Mr. *Dryden* aſcertains the Unity of Time to be twenty-four Hours: That one Act muſt not take up half a Day, but the Time of every Act be equally divided. And *Ariſtotle* ſays, that the Time of Tragedy ought to be included in that which the Sun takes to perform his Career in, or very near it. But *Dacier* ſays, that *Ariſtotle* meant the Courſe of the Sun in a Day, from his Riſing to his Setting, fourteen or fifteen Hours Time; and that he ſays is too long: And that the moſt perfect Pieces are thoſe of *Sophocles*, which require no longer Time for the Action than the Repreſentation takes up; which in *Sophocles*'s beſt Plays is not above four Hours.

3. *Unity of Place* [in the Drama] Mr. *Dryden* ſays, requires that the Scene ought to be the ſame at the End, that it was at the Beginning of the Play, the ſame throughout. But this Unity is ſeldom obſerved in our taking Plays. If the Poets were confined to that, they would want Intrigue-Room.

TROPE [in *Rhetorick*] the Word is derived from τρέπω, to turn. A Trope ſignifies the Thing to which it is apply'd, only on account of the Connection and Relation it has to that whoſe proper Name it is; or it is, when a Word is carried from a Thing, which it ſignifies properly, to another that it ſignifies but indifferently. And tho' we may reckon as many Sorts of Tropes, as we can denote different Relations, yet *Rhetoricians* have eſtabliſhed but a few, as *Metonymy*, *Synechdoche*, *Metanomaſia*, a *Metaphor*, an *Allegory*, a *Litotes*, an *Hyperbole*, an *Irony*, and *Catachreſis.*

Tropes, when aptly us'd, are a lively Picture of the Things treated of; as when a great General is call'd the *Thunder of the War*, the Image of Thunder is a ſenſible Repreſentation of the Courage and Power with which this General conquers.

In uſing *Tropes*, great Care ought to be taken that there is always a Proportion between the natural Idea of the *Trope*, and that you would infuſe into thoſe that hear or read it, eſpecially, that it does not beget one quite contrary to what you intended by it. The Riches of a Language are ſaid to conſiſt in *Tropes*; and as too much Riches oftentimes breed Diſorders in Government, ſo too many *Tropes* will occaſion much Diſorders in a Diſcourſe: They ſhould not be uſed, but to expreſs ſomething that could not be expreſſed ſo well in the common Terms; and when we are obliged by Neceſſity to uſe them, they ought to be clear, and proportioned to the Idea of which we would give an Image.

As to the Neceſſity of uſing *Tropes*: If a Perſon would give an Idea of a Rock of an extraordinary Height, the Words *great* and *high*, being Words that are apply'd to Rocks of a common Size and Height, will not do; but if he ſays, a Rock that threatens the Skies, then the Idea of the Skies, that are above all Things elſe, and the Idea of Threatening (that agrees with a Man that is above others) will form an Idea of the extraordinary Height of the Rock, which could not well be expreſſed any other Way, but by this *Hyperbole.*

Beſides, as thoſe *Tropes* are quick Expreſſions, foreign to the Subject, which we are ſupply'd with by Uſe and Art, to be the Signs not only of the Emotions of our Thoughts, but of our Wits; ſo alſo the Paſſions have a particular Character, by which they paint out themſelves in Diſcourſe. See *Paſſion.*

Tho' the Barrenneſs of Languages frequently obliges us to make Uſe of Tropick Expreſſions, even when we are calm, and in Repoſe; yet the common Uſe of them (which generally makes Objects appear extraordinary) ſhould only be where ordinary Terms will not repreſent them ſo lively as we would have them.

TRO'PER [*old Rec.*] a Book of alternate Turns or Reſponſes in Singing Maſs.

TROPHO'NIUS, a cunning Soothſayer, who made a great Cave in *Boætia*, whence he uſually gave out his Oracles. After his Death, a Spirit was thought to enter into it, which ſupplied his Place in giving Oracles.

The Manner of conſulting this Oracle is delivered to us by *Pauſanias*, to the Purpoſe following: He, that goes into this Cave, muſt firſt make his Abode in the Chapel of *Good Genius*, and *Good Fortune*, employing himſelf in performing of ſome Ceremonies by Way of Atonement for former Offences, and is to bathe in the River of *Hercyne.* At his Going down he ſacrifices to *Trophonius* and other Deities; and the Prieſt conſults the Bowels of the Victim, and accordingly pronounces, whether the Deity will give an auſpicious and ſatisfactory Anſwer. Then the Conſulter is brought after Bathing by the Prieſt, to drink a Doſe of the Water of the River call'd *Lethe* or *Oblivion*; and after that he takes the Water of *Mnemoſyne* or *Remembrance*, that he may remember what ſhall be exhibited to him in his Deſcent. Among which is expoſed a Statue adorn'd with admirable Carving, which is given out to have been the Workmanſhip of *Dædalus* himſelf. Then having done Obeyſance, and muttered over a Prayer or two, being clothed in a Linnen Habit, and ſet off with Ribbons, *&c.* he approaches the Oracle, which is ſituated within a Mountain near a Grove, the Foundation of which is built ſpherical-wiſe, of white Stone, about the Size and Circumference of a Threſhing-Floor, but ſcarce two Cubits high, ſupporting brazen Obelisks, encompaſſed round with Ligaments of Braſs, between which there are Doors that

guide

guide the Paſſage into the Middle of the Floor, where there is a Sort of a Cave, not the Product of rude Nature, but built with the niceſt Accuracy of Mechaniſm and Proportion; the Form of it is like an Oven, the Breadth about nine Cubits, the Depth eight, but there are no Stairs; but all that come bring with them a narrow light Ladder, by which they have deſcended to the Bottom. There is a Cave between the Roof and the Pavement, having a very narrow Entrance; at the Mouth of which the Perſon lies all along, and ſhoves himſelf Feet foremoſt into the Cave, and then he thruſts in his Knees; after a while the reſt of his Body is roll'd along, by a Force not unlike that of a great rapid River, which over-powering a Man with its Vortex tumbles him over Head and Ears; and afterwards he returns the ſame Way back, with his Feet foremoſt. When the Conſultant is return'd, the Prieſt places him on *Mnemoſyne*'s Throne, which is not far from the Shrine, and enquires of him what he had ſeen and heard, and relates it to others, he being yet ſtupified, and full of Amazement; and then he carries him to the Temple of *Good Genius*, and *Good Fortune*, and after ſome Time he is reſtored to his former Senſes.

VE'NUS [ſo called, as ſome ſay *a veniendo*, coming, becauſe ſhe comes to every Thing. But *Varro* derives *Venus*, of *viendo*, *i. e.* binding, becauſe ſhe binds and unites Souls together. The *Greeks* call her Ἀφροδίτη, of ἄφρος Froth, as being produced out of the Foam of the Sea, as follows.] Some tell us that when *Saturn* had committed an Action full of Impiety, and with his graceleſs Scythe had cut off the Genitals of his Father *Cælus* (by that Means to deprive him of the Power of begetting) he threw them into the Sea; where, by the continual Agitation of the Waves, they found a favourable Womb among the Froth, and out of this bleeding Subſtance *Venus* was produced. Again, other of the Poets tells us that ſhe was the Daughter of *Jupiter* and the Goddeſs *Dione*.

The Poets alſo make Mention of three *Venus*'s: The firſt, the Daughter of *Cælus*; the ſecond crept out of the Froth of the Sea (as before); and the third, the Daughter of *Jupiter* and *Dione*, who was married to *Vulcan*.

Venus was the Goddeſs of Love and Pleaſure, on account of her extraordinary Beauty. Her Chariot was drawn by Swans and Doves, accounted laſcivious Birds.

The Poets aſcribe to her ſeveral Children, as *Hymenæus*, the God of Marriages, and the three *Charities* or *Graces* were her Daughters and Companions; alſo the two *Cupids*, the Gods of Love, the one of honeſt Love, and the other of unlawful and carnal Pleaſures; and that infamous Deity *Priapus* was accounted her Son; and alſo *Æneas*; but ſhe never had any Children by her Husband *Vulcan*.

Venus had ſeveral Temples built to her in the City of *Rome*. One to *Venus Erycina*, where was the Statue of *Amor Lætheus*, dipping his Arrows in a River; another to *Venus Libitina*, where the Urns and Coffins of the moſt conſiderable Perſons of *Rome* were placed; another to *Venus Verticordia*, who was called *Venus Viriplaca*, where the Women appeared with their Husbands when there was any Difference between them, to find ſome Way of Reconciliation. The uſual Sacrifices offered to her were Doves, Swans, Sparrows, *&c.* and to her was dedicated the Roſe an Inducement to Love, and the Myrtle-Tree a Symbol of Peace.

Venus is often painted with a beautiful Countenance, Golden Hair, attired in a Robe of Black, Scarlet, or Dun Colour, with her Son *Cupid* by her; and ſometimes Doves and Cypreſs-Trees, and ſometimes in a Chariot drawn by Swans or Doves.

It is very probable that *Venus* was ſaid to have been born of the Sea, for no other Reaſon than becauſe the Cauſe, that effects all Things, requires Moiſture and Motion.

And

And the Sea has both theſe in a very large Degree.

They ſeem to be of this Opinion who ſay ſhe was the Daughter of *Diana*: For Moiſture is διερὸν, *i. e.* ſomething ſplendid and vivid.

Venus is feigned to be extremely beautiful, becauſe ſhe affords Men the Pleaſure of Coition, which they find to ſurpaſs by far all Things elſe.

She is decorated with the Title of φιλομείδης, *i. e.* delighting in Laughter, becauſe ſhe is very prone to Laughter. The Cauſe of this Epithet is, Mirth and Laughter frequently accompany the venereal Act, and Perſons are then very familiar.

The *Graces* are repreſented as ſitting by *Venus*, and are her Companions and Attendants; alſo *Suadela* and *Mercury*. But why? Becauſe thoſe that are loved are pleaſed with amorous Orations and Favour (*Love*) or with the Pleaſure that *Venus* affords in venereal Embraces.

She is called *Cytherea* from κύησις, *i. e.* Impregnation, which follows Coition, or becauſe for the moſt part it uſes to ſlacken or lay venereal Deſires.

She is ſignified by theſe three θέσεις, *i. e*, heavenly, πάνδημος, *i. e.* vulgar or common, and παιδία, *i. e.* the Cauſe of all Things; which intimate that her Power and Efficacy is conſpicuous in Heaven, Earth, and Sea.

Among the Birds ſhe delights in none ſo much as the Dove, becauſe of its Chaſtity and amorous Courtſhip; for the Dove is amorous, and the Symbol of true Love, on account of its Manner of Kiſſing. She has an Antipathy to Swine, becauſe of their Filthineſs.

Among Plants the Myrtle is dedicated to *Venus*, becauſe the Myrtle is accounted proper to engage or promote Love.

Alſo *Philyra* is ſacred to her, becauſe it promotes Venery; and they make Uſe of that chiefly in making Garlands, *Phuruttius*.

And as it is a common Saying in the Schools, all the Virtues are link'd together; ſo we may conclude, that all the (Cardinal) Virtues are helpful and aſſiſtant one to the other; for it is impoſſible for any one to be prudent, without being a Partaker of Fortitude, Temperance, and Juſtice.

The Antients [in *Painting,* &c.] repreſented Virtue by *Hercules,* only clothed with a Lion's Skin and his Club, performing ſome one of his twelve Labours; as offering to ſtrike a Dragon, guarding an Apple-tree, *&c.* or holding in his Hand three golden Apples. The Goddeſs *Veſta* was highly honoured by the *Romans:* They appointed to her particular Sacrifices and Temples, altho' the Poets do confound the Name of *Veſta* with that of *Cybele*. She was accounted the Goddeſs of Elemental Fire: Her Temple was round, and in it were two Lamps continually burning. Some ſay that there was, in the innermoſt Part of it, a Fire ſuſpended in the Air in Pots of Earth, kept always alive by the *Veſtal* Virgins; and, if it happened by any Misfortune to be extinct, ſome fearful Accident befel the *Roman* Empire, and therefore they puniſhed the *Veſtal* Virgins, by whoſe Negligence the Fire went out, in a very cruel Manner.

Veſta was alſo ſometimes ſtiled *Mater*, and had her Statues ſtanding in many Porches, as the Chief of the Houſhold Goddeſſes. Her Temple was magnificent, and in it was depoſited the *Palladium* or Image of *Pallas*, which *Æneas* is ſaid to have brought with him from *Troy*; this was highly eſteemed by the *Romans*, becauſe the Oracle had pronounced, that the Safety of the Empire depended upon the Preſervation of it. On the Top of *Veſta*'s Temple was placed her Effigies ſitting, having little *Jupiter* in her Arms: Her Prieſteſſes were to keep their Virginity thirty Years, which was the Time appointed for their Attendance. They were had in ſuch high Honour, that, if they caſually met in the Streets an Offender, they could procure his Pardon; but, if they diſhonoured the Service of their Goddeſs by carnal Copulation with any Man, they were to die without Mercy, being condemned to be buried alive with Water and Bread.

VI'PER [*vipera*, L.] a poiſonous Reptile of the Serpent Kind; an Adder.

Tho' this Serpent is one of the moſt dangerous Poiſons in the animal Kingdom, yet the Fleſh is of very great Uſe in Medicine.

The Body is of two Colours, aſh-coloured or yellow, and the Ground ſpeckled with longiſh brown Spots. Ithas Scales under its Belly which look like well poliſhed Steel; the Male Vipers have two Sets of genital Inſtruments, and the Females two Matrixes, *&c.* they do'nt lay Eggs and hatch them, but are *viviparous*, bringing forth their young alive; which being wrapped up in thin Skins burſt on the third Day, and they are ſet at Liberty. The Antients did believe that Vipers kill'd their Mother upon their Delivery; but this has been found to be a Miſtake. The Number of Young brought forth in 10 Days Time, by the Female, is 2; but one on each Day. As for the Form of this Reptile, the Head is the largeſt and flatteſt of all the ſerpentine Race, the Snout reſembling that of a Hog; they are uſually half an Ell long and an Inch thick.

It never leaps like other Serpents, but creeps, and that ſlowly; but yet is nimble enough to bite, when provok'd.

It has 16 immoveable Teeth in each Jaw; but theſe are not thoſe with which they give the deadly Bite, they being two other large ſharp Teeth, hooked, hollow, and tranſparent, called *Canine Teeth*. Theſe are ſituated in the upper Jaw, one on each ſide. Theſe Teeth are flexible in their Articulations, and uſually lie flat along the Jaw, the Viper never erecting them, but when it would bite.

Theſe

These two Teeth are encompass'd at the Roots or Basis with a Vesicle or Bladder, which contains a yellow, insipid salivous Juice, about the Quantity of a large Drop. Its Body is not at all fetid, whereas the inward Parts of all other Serpents are intolerably noisome.

A VIPER [*Hieroglyphically*] was put to represent a wicked Angel; for as the Poison of Vipers is quick and powerful, so those destroying Spirits were thought to be quick and nimble in bringing about the Destruction of Mankind.

It was also used to represent the Danger of too much Love and Ingratitude; because it is related that the Female Viper destroys the Male at the Time of Copulation, and that the young Ones revenge the Death of their Sire, by gnawing out the Belly of their Dam, and so opening a Passage into the World.

Vi'sion, is a Senſation in the Brain, which proceeds from a due and various Motion of the Optick Nerves, produced in the Bottom of the Eye, by the Rays of Light coming from any Object, by which Means the Soul perceives the enlighten'd Thing, together with its Quantity, Quality, Figure, *&c.*

Vi'sion, an Apparition, Phantaſm, or Ghoſt; alſo a divine Revelation in a Dream.

Vision [in *Opticks*] the phyſical Cauſe of Viſion or Sight ſeems to be that the Rays of Light, ſtriking on the Bottom of the Eye, do there excite certain Vibrations in the *Tunica Retina*; which Vibrations being propagated, as far as the Brain by the *ſolid Fibres of the Optick Nerves*, do there cauſe the Senſe of *Seeing*.

For as denſe Bodies do retain their Heat longeſt, and that in Proportion to their Denſity, they retain it longer as they are more denſe; ſo the Vibrations of their Particles are of a more durable Nature than thoſe of rarer Bodies, and can be propagated to greater Diſtances; wherefore the ſolid and denſe Fibres of the Nerves, whoſe Matter is of an homogeneal and uniform Nature, are very proper to tranſmit to the Brain ſuch Motions as are impreſs'd on the external Organs of our Senſes.

For that Motion, which can preſerve itſelf a good while in one and the ſame Part of any Body, can alſo be propagated a great Way from one Part of it to another; provided the Body be of an homogeneal Nature, and that the Motion be not reflected, refracted, interrupted, or diſturbed by any Inequality in that Body.

Faint Vision, is when a few Rays make up one Pencil; and tho' this may be diſtinct, yet it may be obſcure and dark, at leaſt not ſo bright and ſtrong, as if a greater Number of Rays met together.

Reflected Vision, is when the Rays of Light are reflected and turned back again from any Body to the Eye.

VULCAN [ſo called of *volando* flying, and *candens* growing hot, or of *majore vi ignis*, and *fulgere*, q. *Fulganus*, *Varro*] according to the Poets, was the God of Fire, was the Son of *Jupiter*, by his Wife *Juno*, but being very deformed, when *Jupiter* ſaw how ill-ſhapen and ugly he was, he kick'd him down from Heaven and by falling upon the Earth; the poor Babe broke one of his Legs, whereof he halted ever after. But *Thetis* and the Nymphs took Pity of him, and nurs'd him up: And when he came to be of Years he follow'd the Trade of a Blackſmith, and wrought for the reſt of the Gods, eſpecially for *Jupiter*, for whom he made Thunder-bolts. For that Purpoſe he had ſeveral Forges or Shops in the Iſles of *Lemnos*, *Lipara*, and in Mount *Ætna*. He had Aſſiſtants or Journey-men that were called *Cyclops*, becauſe they had but one great Eye in the Middle of their Forehead; the moſt noted of which were *Brontes*, *Steropes*, and *Pyracmon*. *Vulcan* had two Wives, *Aglaia* and *Venus*; but *Venus* had no Kindneſs for him, by reaſon of his Deformity, and therefore ſought Satisfaction ſomewhere elſe, and readily accepted of the Embraces of *Mars*: But *Apollo* gave Notice of their Meeting to *Vulcan*, who found a Way to ſurprize *Mars* in the Embraces of his Wife, and ſpreading his Net all over the Place caught them together; and to put them to the greater Shame he ſent for all the Gods to be Witneſſes of their Diſhoneſty and his Diſhonour.

To *Vulcan* is aſcribed the Making the Chariot of the Sun and the Armour of the Gods and the Heroes. His Feaſts were named *Protervia*, in which the *Romans* ran about with lighted Torches in Honour of him.

At the Foot of Mount *Ætna* there was a Temple erected, and a Grove planted in Honour of him, which was kept by a Dog, who (it is ſaid) would tear the Vicious in Pieces (if they offered to approach) but would fawn upon ſuch as were virtuous and good.

By *Vulcan* is underſtood to be meant natural Heat; and therefore the *Egyptians*, in their *Hieroglyphicks*, repreſented *Vulcan*, by an Egg proceeding out of the Mouth of *Jupiter*.

There were ſeveral *Vulcans*: The firſt was the Son of *Cælus*, the ſecond of *Nilus*, named *Otas*, the third of *Jupiter* and *Juno*, and the fourth the Son of *Mænalius*, who dwelt near *Sicily*, in the Iſlands called *Vulcaniæ Inſulæ*.

A Deſcription of the ORRERY.

ORRERY, The Name of a late invented Machine which repreſents the *Solar Syſtem*, according to *Copernicus*, in which the Sun in the Center has a Motion about his own Axis, and about him all the Primary and Secondary Planets perform their Annual and Diurnal Motions in their reſpective Orbits, by the Turning of the Handle at H.

The firſt of thoſe Orrery's was made by the famous Mechanic, Mr. *Graham*, Watch-Maker in *Fleet-ſtreet*, *London*, who was encouraged by a Noble Lord, whoſe Title the Machine bears. There has been ſeveral of them made, of which ſome only had the Sun, Earth, and Moon, thoſe only repreſented the Annual and Diurnal Motion of the Earth, the Change of the Seaſons, and the Encreaſe and Decreaſe of the Days and Nights, with the Revolution of the Moon about the Earth, and her various Aſpects, together with the Nature of the Eclipſes of the Sun and Moon: Again, there were other Orreries made, which had the two inferior Planets, *viz.. Mercury* and *Venus*, as alſo the Earth and Moon, which by Turning of the Handle, deſcribe their Orbits in their reſpective periodical Times, and repreſent their various Aſpects. But thoſe which are the moſt compleat, have all the Planets both Primary and Secondary, as is repreſented in Fig. 1. In which S repreſents the Sun placed in the Center of this our *Solar Syſtem*, tho' in Nature, he is not exactly in the Center, for it is obſerved, that the Orbits of the Planets are Ellipſes, and that the Sun is one of the Focuſes of thoſe Ellipſes: But when ſuch a vaſt Expanſion as our *Solar Syſtem* is reduc'd to ſuch a ſmall Figure as the Orrery

then the Orbits may be made Circles without any conſiderable Error.

Next to the Sun is the Orbit of *Mercury*, and next to that the Orbit of *Venus*; the firſt is repreſented by the Ball at m, in Fig. 1. and the laſt by that at v, which in the Machine are repreſented by two Silver Balls on two Wiers.

Next to the Orbit of *Venus*, is the Orbit of our Earth, which in the Orrery, is repreſented by a Silver Plate, on which the Signs of the Zodiac, the Degrees of the Ecliptic, and the Days of each Month are drawn, and in Fig. 1. is repreſented by the Circle o o o o, and the Earth is repreſented by an Ivory Ball placed upon an Axis in Fig. 1. at t, ſo as to make an Angle with the Plane of the Horizon of 66 ½ Degrees, that is, it declines from being Vertical 23 ½ Degrees equal to the Angle made by the Interſection of the Ecliptic and Equator. About the Ivory Ball there is a Silver Circle, which is placed ſo as to incline to the Earth's Orbit in an Angle of 8 Degrees, which repreſents the Orbit of the Moon; and in Fig. 1. is repreſented by the Circle 111, and the Moon is repreſented by a Silver Ball as at 1 over one half of the Moon; there is a Cape, which as the Moon goes round the Earth by the Turning of the Handle at H, the Cape ſerves to repreſent the Moon's Phaſes as they appear, when obſerved by the Inhabitants of this Earth. Before we proceed to deſcribe the reſt of the Orbits of the Planets, it will be neceſſary to conſider ſome of the Phœnomena, which the Orrery repreſents of thoſe Bodies already named; and in order thereto, it is to be obſerved, that by the Turning the Winch or Handle at H, the Planets are all put in Motion, and that one Turn of that Handle is equal to one Diurnal Revolution of the Earth upon its Axis, and by which the Succeſſion of Day and Night is moſt beautifully repreſented; as alſo, the Variety that exhiſts on our Earth of the Sun, continuing always riſing to ſome Meridians, ſetting to others, and that there is a continued Seriſes of Mid-day and Midnight to the ſeveral Inhabitants of this Earth; for the Earth turning about on its Axis from *Weſt* to *Eaſt*, makes the Sun appear to paſs from *Eaſt* to *Weſt* in the ſame time; and as the Sun, by being on the Meredian of any Place, makes Mid-day on that Meridian, and the general Horizon, which ſeperates the inlightned from the darkned Hemiſphere, reaches 90 Degrees round that Point where the Sun is Vertical; therefore, as the Earth turns round from *Weſt* to *Eaſt*, the Sun will proceed from the *Eaſtern* to the *Weſtern* Meridians, and ſo make a continual Succeſſion of Mid-day over all the Globe, as may plainly be ſeen by turning the Handle H, and that all the 24 Hours of our Day, exiſts always to different Meridians on the Globe; Again, while the Earth revolves once round its own Axis which is called its Diurnal Motion, it in that time is carried forward about one Degree in its Orbit round the Sun, which is called its Annual Motion, and when the Sun is in *Aries*, it is evident that the Sun will appear in the oppoſite Point of the Ecliptic, and the Earth's general Horizon, which ſeperates the inlightned from the darkned Hemiſphere, coincides with both Poles, and divides the Equator and all its Parallels equally as is repreſented in Fig 2. where the Lamp repreſents the Sun in the Orrery, which by the Means of a Convex Glaſs, caſts a ſtrong Light upon the Terrella, (the Room being darkned) and when the Earth is in *Aries* or *Libra*, the Rays of the Lamp will enlighten one half of the Equator, and of each of its Parallels, and the Horizon, which ſeperates the inlightned from the darkned Hemiſphere, paſſes thro' both the Poles as it is repreſented at P, Fig. 2. and as the Equator and all its Parallels are equally divided by the general Horizon, therefore the Day will be equal to the Night over the whole Globe, when the Earth is in one of thoſe two Points of *Aries* and *Libra*, as will evidently appear, by turning the Handle once round, and as the Earth moves thro' *Libra*, *Scorpio*, and *Sagitarius*, the inlightned Arch of the *Northern* Parallels of Latitude encreaſeth, while the inlightned Arch of the *Southern* Parallels decreaſe, by which is repreſented the Increaſe of the Day in the *Northern* Latitudes above the Length of the Night, and the Decreaſe of the Length of the Day in the *Southern* Latitudes; and the Earth being in the firſt Degree of *Capricorn*, the general Horizon reacheth 23 ½ Degrees on the other Side of the *North* Pole, and conſequently the whole *North* Frigid Zone has thenone continued Day, while the *South* Frigid Zone has one continued Night, as is repreſented, Fig. 2. at Q, and as the Earth is carry'd thro' *Capricorn*, *Aquarius*, and *Piſes*, the Rays of the Lamp ſhews the Decreaſe of the Days in the *Northern*, and Increaſe in the *Southern* Latitudes till the Earth be in *Aries*, where the Days and Nights are again equal, and here it is to be obſerved, that the Earth from the firſt of *Aries* to *Libra*, turns 178 times round its own Axis, and all that time the *North* Pole was within the Rays of the Lamp without any Night, while the *South* Pole had all Night without any Rays of the Lamp to repreſent Day, and while the Earth moves thro' the ſix *Northern* Signs, the ſame Phœnomena will happen to thoſe in the *South* Side of the Equator, as did to thoſe Inhabitants on the *North* Side thereof, when the Earth was in the *Southern* Signs. The Lamp is contrived to be carried about with the Annual Plate, by which it repreſents the Courſe of Nature ſo as to emit Rays of Light, and to inlighten that Side of Terrella which is turned towards it, while the oppoſite Side of the Terrella is in darkneſs. While the Earth is carry'd round the Sun by 365 ¼ Turns of the Handle, *Mercury* is carry'd round the Sun in 88 Turns of the Handle, and *Venus* in 244 Turns, which repreſents, that the Length of the Year in *Mercury* is equal to 88 of our Days, and the Length of the Year in *Venus* to 224 of our Days; as the Planets are divided into Primary and Secondary, ſo likewiſe they are divided into Inferior and Superior: The Primary Planets are thoſe that revolve about the Sun as the Center of their Motions, and the Secondary thoſe that revolve about, or attend ſome of the Primary Planets.

The Inferior Planets are *Mercury* and *Venus*, whoſe Periodical Times we have already compared with that of our Earth; the Superior Planets are *Mars*, *Jupiter*, and *Saturn*, whoſe Periodical Times, compared with that of our Earth, ſtands thus: *Mars* next, without our Earth perform his Revolution about the Sun in 687 Turns of the Handle, and is reperſented in Fig 1. at M.

Jupiter in 4332 Turns of the Handle at H performs his Revolution which agrees to 4332 Revolutions of our Earth about its own Axis; and laſt of all, *Saturn* in 10759 Turns of the Handle compleats his Revolution, which is the Length of the *Saturnian* Year, and when compared with that of ours, is about 30 of our Years; *Jupiter* is repreſented in Fig 1. at I, and *Saturn* at K. Theſe Primary Planets, by the Turning of the Handle at H, deſcribe their Orbit in the Times abovementioned, which in ſome Degree, ſhews the Beauty of the Contrivance, and the Exactneſs of the Numbers by which the Wheels and Pinions are made to repreſent Nature in ſome of the moſt ſurprizing Phœnomena, that the Mind of Man has hitherto been capable to account for, and to reduce to Calculation; but when we conſider that the ſame Machine likewiſe has the Motions of the Secondary Planets as they move about their Primaries; as alſo how thoſe Bodies eclipſe one another, and the Time and Place that the Inhabitants of thoſe Globes will be depriv'd either of the Light emitted from the Lucid Body, or of the reflected Light from the Opake Bodies; when theſe with a vaſt many other Phœnomena are conſidered, which the Orrery repreſents exact as the Infinite Contriver of the Univerſe has made them to appear in Nature, it muſt then be eſteemed as the moſt beautiful Production of the Mechanical Arts.

Fig. 3. Repreſents that Part ſeparate, which contains the Orbit of the Earth and Moon. The Figure is raiſed from a Geometrical Plane without any Diminution of the Parts by Perſpective, that the Nature of it may the better appear: This Figure ſerves to explain the Nature of Eclipſes, for by the Conſtruction of the Machine, the Sun at S, and the Earth at T, and T, have their Centers exactly at the ſame Height above the Place they ſtand on, while the Moon's Orbit O P Q R is inclined to that Plane; therefore the Parts of the Moon's Orbit will be in ſome Places higher above the Plane than the Earth's Center, and in ſome Places lower as in the Figures riſing higheſt at O, and loweſt at P. Now the Moon's Orbit being carried along with the Earth round the Sun, changes its Poſition perpetually; ſo that the loweſt and higheſt Points of it, O and P, are ſometimes in a Line paſſing to the Sun, and ſometimes in a quite contrary Poſition, as is repreſented in Fig. 3. thence it comes to paſs, that we have ſometimes Eclipſes, and ſometimes not.

The Orrery is ſometimes incloſed in an Armillary Sphere, by which Means the Situation of the Solar Syſtem in reſpect of any Latitude, may be repreſented, as is ſhewn in this Sketch, mark'd Fig. 4. Mr. *Glynn*, Mathematical Inſtrument-Maker in *London*, was the Firſt that apply'd the Orrery to the Armillary Sphere, with ſeveral other Improvements which would be too tedious to mention in this Place; therefore ſhall refer the Reader to a Book which is now in the Preſs, and that I ſhall very ſoon publiſh, which contains a full Deſcription of the Orrery, with a great Variety of thoſe beautiful Problems which may be perform'd by it.

The moſt curious of theſe Orreries placed in an Armillary Sphere, is in the Library of that truly Noble Lord, the Earl of PEMBROKE, who is famous for Learning, and the greateſt Patron of Sciences which the preſent Age has produced.

A *Wolf* held faſt by the Ears, was an Emblem of a Man encompaſſed with Difficulties and Troubles. It is alſo taken for an Emblem of a plundering Soldier, becauſe of its bloody, cruel and ravenous Nature; and thence the Antients (who held the Tranſmigration of Souls) were of Opinion, that the Souls of thoſe Men, who were given to rob and plunder, at their Death went into wolves.

Wolves; this Land was antiently very much infeſted with wolves. But King *Edgar*, in the Year 959, impoſing on the *Welſh* a Tribute of 300 wolves, *i. e.* that they ſhould kill ſo many yearly, in time the Land was cleared of wolves.

Wolves-*Heads* [in *antient Times*] out-lawed Perſons ſo called, becauſe as there was a Price ſet on the Heads of Wolves, Foxes and other deſtructive Animals, ſo out-law'd Perſons, being out of the protection of the Laws, were liable to be killed by any who would take them if they made reſiſtance or fled.

To Wont [ꝑunian, ȝeꝑunian, *Sax.*] to be uſed or accuſtomed to.

Wo'nders *of the World*. Theſe were generally accounted ſeven in Number.

1. The *Wall* of *Babylon*, and the pleaſant Penſil Gardens planted on it, by *Semiramis*, built of a fat Clay, only found near the River *Euphrates*, and were very large and high. *Pliny* ſpeaks of 200 Feet in Height, and ſome 250; but the common Opinion is, that they were 50 Cubits high, and ſo broad, that two or three Chariots might go upon them in a breaſt without Danger, the Compaſs of them about, is ſaid to be about twenty two *Engliſh* Miles; 300000 Men are ſaid to have been employ'd, in making this Wall, many Years; but ſome ſay it was made in one Year.

2. The *Labyrinth* of *Egypt*. See in Letter *L*.

3. The *Pyramids* of *Egypt*. See *Pyramids*.

4. The *Mauſolæum* of *Cariæ*, which Queen *Artimiſia* built as a Sepulchre for her deceaſed Husband, tho' he was not depoſited there; for the Queen had ſo endeared Affection for him, that ſhe cauſed the Aſhes of his conſumed Body to be put into a Cup of Wine, and drank them to give him a Lodging in her Heart. See *Maſuolæum* in Letter *L*.

5. The *Coloſſus* of *Rhodes*. See *Coloſſus*.

6. *Jupiter Olympius*, is ſaid to have been the neateſt of all theſe Works, made by *Phidias*, of 150 Cubits high. The Head was of pure Gold, but the Body was of Braſs. It was erected by the *Eleans*, a People of *Greece*, and placed in a Temple dedicated to *Jupiter*, which was inriched afterwards with many curious Repreſentations, and excellent Statues. This Statue of *Jupiter* was ſitting in a Chair half naked; but from the Girdle downwards he was covered; in the right Hand he held an Eagle, and in the Left a Scepter. The upper Part being uncover'd, intimated how he was known to the Angels; but the lower Parts being covered, ſignified how God hides himſelf in his Works from the inferior Creatures.

The Emperor *Caligula* endeavoured to tranſport this Statue to *Rome*; but thoſe that were employ'd about it, were frighted from their Enterprize by ſome unexpected Accident.

7. The Temple of *Diana* at *Epheſus*, an incomparable work, ſupported by 120 large Pillars, every one the ſole enterprize and work of a King, who was reſolved to make his Piety and Magnificence appear upon his Pillar. See *Diana*.

Wonders *of the Peek* [in *Derbyſhire*.]

The firſt of theſe Wonders is *Chatſworth-Houſe*, &c. the noble Seat of the Duke of *Devonſhire*, where, beſides the Statelineſs of the Edifice, and Curioſities within it, too many here to be deſcribed, there are pleaſant Gardens adorned with exquiſite Water-works. 1. *Neptune* with his Sea Nymphs, which ſeem to ſport themſelves in the Waters, which appear to fall upon Sea-weeds. 2. A Pond where Sea Horſes continually do roll. 3. A Tree, exactly reſembling a Willow, made of Copper, of which (by turning a Cock) every Leaf continually diſtils Drops of Water, and ſo lively repreſents a Shower of Rain. 4. A Grove of Cypreſs and a Caſcade, at the Top of which ſtand two Sea Nymphs, with each a Jar under her Arm, from whence the water falling upon the Caſcade, produces a loud rumbling Noiſe, like the *Egyptian* or *Indian* Cataracts. 5. At the bottom

Bottom of this Caſcade is another Pond, in which is an artificial Roſe, thro' which the water aſcends and hangs ſuſpended in the Air, in the Figure of that Flower. 6. There is another Pond, where there is *Mercury* pointing at the Gods, and throwing up water. 7. There are ſeveral fine Statues of Gladiators, and other Curioſities.

The 2d is the Mountain call'd *Mam-Tor*, which is almoſt continually ſhivering down Earth and great Stones, in ſuch Plenty, and with ſo great a Noiſe, as often to frighten the neighbouring Inhabitants, and to be heard at ſome Miles diſtance, yet never viſibly grows leſs, tho' it hath thus continued for ſeveral Generations.

The 3d is *Elden-Hole*, a wide and terrible Chaſm, about fourteen Yards in Length, and ſeven in Breadth. The Mouth of it craggy, but the inward Receſſes contracted and intricate. It is accounted Bottomleſs, becauſe it could never yet be fathom'd by any Art of Man, tho' divers attempts have been made, tho' it has been plumbed to the Depth of 884 Yards, 80 of which ſunk into the water; and the Earl of *Leiceſter* hired a Man to go down in a Basket of Stones, who was let down 300 Ells, and being pulled up, was both Speechleſs and Senſeleſs, and died within eight Days of a Phrenſy. It is uſual for thoſe that go to ſee it, to throw down Stones, and lay their Ear to the Mouth of the Pit, which make a great Rattling and Noiſe for a long Time, which is leſſened by Degrees, till it gets beyond the Sphere of hearing.

The 4th is *Buxton-Wells*, in Number nine, the water of which is hot, ſulphurous and ſaline, yet not fetid, but very palatable. They ſpring out of a Baſs like Marble, and it is pleaſant to ſee the ſulphurous Halitus break out in Bubbles, and impregnate the water. Theſe waters are very ſalutiferous.

The 5th is *Weeding-Wall* or *Tides-Well*, a Spring that Ebbs and Flows like the Sea, ſometimes two or three times in an Hour; and upon the ſinking of the water makes a guggling Noiſe, like the pouring of Liquors out of Bottles, but much louder. The Diameter of the Spring is about a Yard, and the Depth much the ſame, and the water riſes and falls about three Quarters of a Yard.

The 6th is a remarkable Cave, the Entrance of which is at the Foot of a large Mountain, call'd *Coitmoſs*, by a ſmall Arch, ſo low, for ſeveral Paces, that thoſe who go into it are forced to creep upon all fours for a while; but then it opens to a conſiderable Height, not unlike to the Roof of a large Cathedral. On the right Hand is an hollow Cavern call'd *Pool's Chamber*, where by ſtriking a Stone upon the Wall, a noiſy Echo rebounds. Hence your Guide conducts you, with a Candle, over Ridges and Rocks of Stone, and ſhews you many Repreſentations of Art and Nature, produced by the petrifying water continually dropping from the Roof and Sides of the Rock. There are the Repreſentations of the moſt curious Fret-work, Organ and Choir-work, and in other Places the Figures of Animals, as the Body of a Man, a Lion, a Dog, and many other Beaſts, which a pregnant Fancy readily ſuggeſts, as alſo a Chair, Flitches of Bacon, a Lanthorn, and many other Varieties. A little farther is a Pillar, called *the Queen of* Scots *Pillar*, clear and bright as Alablaſter; and beyond that a ſteep Aſcent of near a Quarter of a Mile high, which termines near the Roof in a hollow call'd *the Needles Eye*, in which when the Guide places his Candle, it repreſents a Star in the Firmament. A Piſtol being fired off, near the Queen of *Scot*'s Pillar, gives a Report near as loud as a Cannon. You return back a different way, paſſing ſeveral Currents of water. Some ſay this Cave takes its Name of one *Pool*, a notorious Robber and Outlaw, who fled from Juſtice; others, that he was ſome Hermit, who there lived a retired Life. A little Diſtance from *Pool's Hole*, is a ſmall clear Brook, memorable for its Compoſition of hot and cold water, ſo united in the ſame Stream, that you may at once put the Finger and Thumb of the ſame Hand, the one into the hot, and the other into the cold.

The 7th is the *Devil's Arſe* or *Peak's Arſe*, a wide ſubterraneous Cavern running under the Hill near *Caſtleton*, the Entrance of which is large, but the farther you go, the narrower it grows: The Top of it is very high, and appears to the Eye to be a moſt graceful Arch, chequer'd with diverſity of coloured Stones, from which continually drops a ſparry water that petrifies. Within this Arch are ſeveral ſmall Buildings, which are inhabited by poor People, who lie there ready to attend Travellers who have the Curioſity to come to ſee theſe Rarities. This Cave, after you are gotten a little way in it, is very dark and ſlippery, by reaſon of a Current of water that runs along it, and you are forced to ſtoop, becauſe the Rock hangs ſloping ſo low; but having paſſed this Place, and a Brook adjoining (which is not to be waded ſometimes) the Arch opens it ſelf again, and brings you to a ſecond Current, with large Banks of Sand in and by it. This Current is paſſable, but in a little Time you come to a third Current that is impaſſable, and then the Rock cloſes.

This gate being become ruinous, was rebuilt in the year 1617. The north ſide of it is adorned with the figure of king *James* I. on horſeback in *relievo*, in the ſame poſture that he came into *England*, and made his publick entry into *London* through that gate. On each ſide is a niche; in which are the figures of the prophets *Jeremiah* and *Samuel*; *Jeremiah* on the eaſt-ſide, and *Samuel* on the weſt; with references to *Jeremiah*, the 17th chapter and 25th verſe, *Then ſhall enter into the gates of this city, kings and princes ſitting upon the throne of* David, *riding in chariots and on horſes, they and their princes the men of* Judah, *and the inhabitants of* Jeruſalem *and this city, ſhall remain for ever.* And the 12th chapter of the 1ſt book of *Samuel* and 1ſt verſe, *And* Samuel *ſaid unto all* Iſrael, *behold, I have hearkened unto your voice, in all that ye have ſaid unto me, and have made a king over you.*

This gate was new built in the year 1609; upon the top of the gate eaſtward, ſtands a fair golden ſphere with a vane on it. On the upper battlements are two ancient ſoldiers, each holding a ſtone ball in his hand, as denying entrance to any bold enemies. Beneath in a large ſquare, ſtands the figure of king *James* I. in gilt armour; at his feet on one ſide is a golden lion, and on the other ſide an unicorn chain'd and couchant; the firſt is the ſupporter for *England*, and the unicorn for *Scotland*: Their being in a couchant poſture is an emblem of the union of the 2 kingdoms, as alſo it denotes their awe and humility in the preſence of ſo great a prince. On the weſt-ſide of the gate, the higheſt of all, is the figure of fortune gilt with gold, ſtanding upon a maund or globe, with a proſperous ſail ſpreading over her head, and looking pleaſantly on the city. Beneath this figure in a large ſquare, are placed the king's arms ſomewhat lower, and to grace each ſide of the gate, are placed 2 female figures, the one the emblem of *Peace* with a dove upon one of her hands, and a gilded wreath or garland in the other; and on the north-ſide ſtands the figure of *Charity* with a child at her breaſt, and another in her hand, implying where *Peace*, *Love* and *Charity* proſper, and are embraced, that city ſhall be happy. BISHOP's-

BISHOP'S-GATE takes its name, as is ſuppos'd, from ſome biſhop of *London*, and probably from *Erkenwald* ſon of king *Offa*, and biſhop of *London*, who died in the year 685; and there being the effigies of two biſhops on this gate, as *Erkenwald* might be the founder of it, ſo it is very probable that it was repaired by *William* the *Norman*, who was biſhop of *London* in the time of *William the Conqueror*; both of which were great benefactors to the city.

Over the gate-way, on the ſouth and north ſides of the gate, are figures in ſtone perhaps of the greateſt antiquity of any now remaining in the city, being probably as old as the gate, that is, about 300 years.

The ſtone figure of a biſhop on the ſouth-ſide, which ſtands high, has a long beard, eyes ſunk and an old mortified face, the mitre on his head, but both his hands beat or worn off by time. On the north-ſide of the gate is another figure of a biſhop of a larger ſize, mitred, clothed in his *Pontificalibus*, his left hand with the croſier broken off, the right hand bleſſing with the two fore-fingers, his face ſmooth, and was probably the courtly biſhop *William* the *Norman*, the favourite of *William the Conqueror*, and the other is probably *Erkenwald* who liv'd 400 years before him. Alſo on the north-ſide of the gate on each ſide of the biſhop, but ſomething higher, are two ancient ſtone-images; on his left hand a *Saxon* king, very probably king *Alfred*, who repair'd the city after the *Danes* had burnt it, and the other probably his ſon-in-law *Aldred* earl of *Mercia*, to whom he committed the cuſtody of it. Theſe errors are what, for want of opportunity before the publication, I have obſerv'd, but doubt not but that there are many more (as in a work of this bulk and variety, may reaſonably be expected) which, however I hope, are neither ſo many nor ſo great, but that the candid reader, as they occur, will be able to correct, and impute rather to the precipitancy of the preſs, than to the negligence of the author.

The conſtruction and uſe of *Nepier's Bones* happening to be omitted in their proper place, it is inſerted here.

They are rods, Plates, or *Lamellæ* of *wood*, *metal*, *paſteboard*, or other matter of an oblong form (as in the table) and each divided into 9 little ſquares; each of which is reſolved into two tables diagonally.

In theſe little ſquares are written the numbers of the multiplication table, in ſuch order as that the units, or right hand figures, are found in the right hand triangle, and the tens on the left hand figures in the left hand triangle; ſee the table.

The uſe of them in multiplication.

To multiply any given number by another; diſpoſe the *Lamellæ* in ſuch order, that the top figures may exhibit the multiplicand, and then join the *Lamella* of units on the left hand, in which ſeek the right hand figure of the multiplicator; and write out the other numbers which correſpond to it in the ſquares of the other *Lamellæ*, adding the ſeveral numbers which occur in the ſame Rhumb together and their ſums. And after the ſame manner write out the other numbers which correſpond to the other figures of the multiplicator; and diſpoſe them under one another as in the common Multiplication; and then add the ſeveral Numbers into one ſum.

As for Example,

If 6123 is to be multiply'd by 356, having tabulated the multiplicator, the ſeveral products thereof into each figure of the multiplier you are directed to by the Index; which being added together (reſpect being had to the due placing their ſum) is 2179788, which is the product of 6123 by 356.

The Uſe of *Nepier's* Bones in Diviſion.

Diſpoſe the *Lamellæ* ſo that the uppermoſt Figures may exhibit the diviſor, to theſe join the *Lamellæ* of units on the left hand. Deſcend under the diviſor till you come to thoſe figures of the dividend, wherein it is firſt required how oft the diviſor is found, or at leaſt the next leſs number, which is to be ſubtracted from the dividend, and write down the number correſponding to this in the place of units for a quotient. Determine the other parts of the quotient after the ſame manner, and the diviſion will be compleated.

As for Example,

Thus, if 2179788 is to be divided by 6123, it will give in the Quotient 356.

Having diſpos'd the *Lamellæ*, or tabulated the diviſor 6123, I ſee that 6123 cannot be had in 2179; therefore I take 5 places, and on the rods finding a number that is equal, or next leſs to 21797, which is 18369, that is, 3 times the diviſor; ſet 3 in the quotient, and ſubtract 18369 from the figures above, and there reſts 3428; to which add 8, the next figure of the dividend, and ſeek again on the rods for it, or the next leſs, which being found to be 5 times, ſet 5 in the quotient, and ſubtract 30615 from 34288, and there reſts 3673; to which add 8 the laſt figure in the dividend, and finding it to be 6 times the diviſor, ſet 6 in the quotient.
